

Vol. XVI. No. 10

Armour Institute of Technology, Chicago, Illinois

Tuesday, November 26, 1935

By Albert M. Lane

THE HEAVY INCREASE in the volume of export business shown by reports of October foreign shipments is significant. An examination of the report revealed that the total gain is to be credited to Italian government orders for materials to be used for military purposes and that American shippers have generally disregarded President Roosevelt's sociation to be held at the Palmer warning against trading with bellig- House on December 12. Mr. Hamerent nations in commodities which mond will be the next president of might be so used. The report sub- the latter group. A complete restantiates earlier predictions that ex- sume of the problem will at that porters of oil, steel scrap and copper time be offered to the group. The would test the strength of the presi- purpose of the meeting is to deterdent's warning rather than graceful- mine if there are enough eligible ly accede by spurning the lucrative employers to make the plan practical. Italian market; and it explains, in part at least, the activity and enthusiasm with which the producers are bidding against each other for Italian contracts.

ALTHOUGH THE government has issued during the last few days a series of demands that the shippers recognize the warnings as indirect embargo orders and has threatened the owners of subsidized carriers with financial reprisals, there is considerable doubt that the trading will be terminated unless more specific and more drastic action is taken. It seems that the government will have to enact specific and drastic embargo regulations if the traffic is to be stopped. Under ordinary circumstances of volume demand for materials with which to prosecute a war the profits are temptingly large, but the conditions that will obtain in the Italian situation by virtue of the implied limitations of supply, resulting from the invocation of League sanctions, will so materially enlarge the trading margin that the temptation will gradiate to an obsession. The hunger for so great a return will nullify whatever little aversion to gambling may now exist with corporation directorates. How ever weak the financial position of the Italian government may be, whatever the action of League members toward enforcement of a blockade, the lure of disproportionate returns will be the inspiration for defiance of governmental restraints.

VIEWED ALONE in the light of the current state of industry, the situation might be considered rather fortunate, for it is obvious that the Italian demand is of sufficient magnitude to substantially relieve ployment. But there is present in the

pack the usual joker. The financial standing of the Italian governmen three months before war was declared was more than merely v satisfactory. British shippers had been at that time sufficiently aggravated by the enormity of unpaid Italian credit as to refuse to make further allowances. They were then refusing to accept even shor time Italian paper. All coal shipments to Italy were made on the cash on delivery basis.

SUBSEQUENT PREPARATIONS for war, along with its prosecution, have further depleted the treasury. The gold reserve, which in July had sunk below the forty per cent low limit, is rapidly reaching the point of exhaustion. No figures are available which would reveal the extent to which Italy is now indebted to (Continued on page 5)

Wieting Is Delegate to Scarab's Conclave

W. S. Wieting was delegated to represent Edfou, the Armour temple, at the regular annual convention of Scarab, professional architectural fraternity. The convention met in Kansas City last Sunday and made a tour of the city before convening yesterday. Later in the day the group visited the University of Kansas. The convention adjourns today. | and R. W. Young.

Progress Made on Cooperative Plan

Whether or not Armour is to install a co-operative mechanical engineering course in conjunction with industry will probably be decided before Christmas. A final report will have been presented to the Board of Trustees by that time.

General Hammond, who is the driving force behind the plan, is now sending invitations to manufacturers in the Chicago area for a meeting of the Metal Trades Association and Illinois Manufacturers As-

W9YW to Contact College Amateurs

Plan Radio News Service for Armour

Should the efforts of the Radio Club materialize, the Armour Tech News will soon be able to get news of other schools via the ether. In an effort to bring about regular communications between the Armour group and radio organizations at other schools, the Radio Club has made contacts from which it is hoped a radio news relay system will be established.

That the news will cover a good part of the world is evident from the contacts and cards received from all parts of the country as well as Canada and Mexico.

To enable the Radio Club to be on the air consistently, the transmitter committee has erected a new 279 foot transmitting antenna, adding Friday, December 20, is the final greatly to the range of the station. | date chosen for the annual junior In addition a 2 kw., 2,200 volt motor | informal, which will be held this the best of the orchestras that have present the Radio Club's equipment | Stevens Hotel. Revised and brought up to date, the constitution of the Armour Tech Athletic Association, first adopted in 1922, will be submitted for the approval of the student body at a general assembly in the near future. The occasion will probably be a pep meeting before the first varsity basketball game of the season, to be played in the 108th engineers' armory on Thursday, December 5, against Ar-

Published in Handbook

Published last week in its complete form in the student handbook and directory, the new A.T.A.A. constitution has yet to be accepted by the student body, but by the time of the meeting most Armour students will probably be familiar with it.

The text of the new constitution follows closely that of the old, most of the changes being of an accommodating nature, prompted by changes at the Institute which made

Revision by D. J. Neal In great part, the work of preparing the revised form of the constitution was done by Donald J. Neal, president of the A.T.A.A. The new form has been approved by the Board of Athletic Control.

Difference between the constitution as given in the handbook and the form now in effect are, in detail, as

Name is Changed

In Article I, the name of the association has been changed from "Armour Tech Athletic Association and Student Union" to "Armour Tech Athletic Association."

The section under Article II-"Object," reading "Passing and enforcing" such acts as it may deem advisable for the government and regulation: of the student body providing that such legislation is approved by the Executive Council of the Institute," chanical engineering, has recently has been omitted, since the Executive completed an analysis of an auto- Council is no longer in existence, and without the section, the Board of Athletic Control, representing the student body and including in its membership neering knowledge, was presented the president, the dean, and the treasurer of the Institute, is given the other powers listed under "Object" without recourse to any other group.

Alumni Omitted Under "Membership," in Article III, the new form of the constitution leaves out alumni as being eligible.

Article IV of the new constitution is entirely new.

In Article V of the new constitution the term "advisory council" is A model of the transmission has no longer applied to the Board of

Also, in Section 2 of this article, the listing of members of the Board of Athletic Control replaces one which included, beside the student members, the Executive Council, no longer in existence, and three faculty members.

The other two sections of this article were not included in the old constitution.

Nominating Committee Detailed Under Section 2 of Article VI, the old constitution merely stated that the nominating committee shall con-

A New Form For The A.T.A.A. Constitution

Sometime next week, Armour students will be asked to make official an altered form of the A.T.A.A. constitution first adopted in 1922. Before the vote is taken, every one will have ample opportunity to consider the changes, since the full text of the new form is given in the student handbook published last week, and all of the changes are described in this week's News. It seems likely that most students will agree that the changes are all desirable, and will ratify the new form.

Practically all of the changes in the constitution were obviously prompted by changes in conditions at Armour. The "Executive Council," so often referred to in the old form, ceased to exist a number of years ago, and the by-laws providing | ing practice? for a reception committee, a social chairman, and a student publicity director have not been observed in the memory of any student now at Armour.

Merely contributing confusion to the arrangement, the articles making elaborate provision for calling the Board of Athletic Control the Advisory Council of the association are plainly unnecessary, while the by-law permitting the A.T.A.A. president to consult with other student leaders is completely superfluous.

There is little doubt but that the new form of the A.T.A.A. constitution will give the most satisfactory results that can be expected. It should be adopted.

On the behalf of the students of Armour, the News wishes to express its deep sympathy with George W. Ormsby whose father died on November 9.

WITH OTHER EDITORS

Confirmation For Idealists (Michigan Daily)

The DuPonts a little more than a week ago purchased the better half of one of the Columbia Spectator's four pages to print an advertisement which went like this:

"There's no use talking—Saturday was an exciting day for Amos Hunter. (You know himthe nice young fellow with the pink cheeks.) That night he had a date with a girl. THE date with THE girl."

We are informed that Amos Hunter, in preparation for this date, "shined up the old bus" with the right automobile polish—DuPont—until it was "handsome enough for a king and queen."

Susie Blossom, who is Amos' girl, was active also. She was putting on a dress made of the right kind of rayon-DuPont.

And so Amos and Susie went to the movies and there they saw a picture made on DuPont film.

"Neither Amos nor Susie realized how chemical research had touched their lives that date," the advertisement informs us. "The shiny car, the rayon dress, and the movie film-all resulted from the work of chemists. As a matter of fact, no day passes that modern chemistry doesn't help make life happier and more complete for themand for you."

Thus spoke the DuPonts.

Two days later the Spectator gave its version: "There's no use talking-Saturday was an exciting day for Amos Hunter. It was the day they bundled him up a uniform and marched him off to save the world for DuPont and Democracy.

"It was the day he kissed Susie, THE girl, goodbye, polished up his rifle with DuPont synthetic goose grease and sailed away on a great big battleship camouflaged with DuPont paint.

"It was the day he began his career as a soldier, which ended when he went over the top of a front-line trench and had his head, the one with the pink cheeks, blown off by a DuPont shell.

"Neither Amos nor Susie had realized how chemical research had touched their lives that day, or how the ballyhoo and buncombe manufactured by arms firms would lead to Amos' extinction."

George Seldes' "Freedom of the Press" has pretty effectively blasted the belief of some | morrow." idealists that the American press is a free one, and has shown that the power of the advertiser can be and is just as great as the power of a tyrannical government.

It is time for cheering, therefore, when a news- housewife, compressing her lips with paper takes to task an important advertiser especially when the newspaper has but recently been informed that its University administration will no longer grant it a subsidy.

STUDENT OPINION

Chem Lab Fees

It is about time a vigorous protest was raised about the misappropriation of certain funds particularly when dream." it has become known that it is distinctly at the expense of one group of students.

The administration has made it known that fees col- dream." lected for the maintenance and improvement of the chemical engineering laboratories have been used for other purposes. Now it is recognized that the continued existence of the Institute is of first importance, and ways losing buttons off his clothes. that in an emergency it might be necessary and justifiable to grab all the available funds. However, to continue this policy over a period of years is manifestly fully enough." unjust from every consideration.

Each chemical pays in four years a total of \$142.50 kuss. "He's awfully slipshod with his in strictly chemical departmental fees (exclusive of de- sewing." posits). This amount does not include the activity fees and other departmental fees. Is it fair that those electing to study chemical engineering should have substantial amounts of their \$142.50 used for purposes in which all students benefit? No, it is not! Neither is it fair to the this one with you, I'm so danced chemical engineering department to take away funds out." meant for equipment and the laboratories.

How many more years must we tolerate this disgust- just pleasingly plump."

More About Social Science

In a letter to the Armour Tech News entitled-"For either." Real Social Sciences", by H. P. Milleville, it is of particular interest to note his quotation from the pamphlet, "Educating the Engineer". "One of the most significant | Senior dance on November 29, reparts of the Development Plan is the revision of curriculum to include more of the humanities subjects."

It is particularly significant when one considers how low her, she flies; flee her, she folfar short the Development Plan has fallen in this respect. | lowe. Three semester hours of humanities have been eliminated, and we now have a total of fifteen semester hours of business, industrial, and commercial work labeled social science. I do not overlook the importance of these business courses. Quite to the contrary, I firmly believe they have their place in the curriculum of an engineering college. Under the circumstances, however, they do not warrant one-ninth of a student's total time at Armour, especially in an already extensive program.

It certainly seems that these fifteen hours can be con-things which resemble an automoveniently allocated so that men of Armour may be given bile. the business training as well as an opportunity of securing the essential fundamentals of the humanities. John F. Kahles, '36.

The Science Department and the Honoraries

The science department is drawing an increasing numwith you?" ber of students every year, the majority of whom rank high scholastically. A problem is created for those organizations on the campus who serve to recognize high scholarship. Here are men who are eligible from the grade standpoint to participate in this particular form of reward, but are in a position of orphans as far as sponsorship. The course the science man elects in his senior year serves as a first boundary in consideration: There are two definite branches - research and adminwell as to interest. On the strength of this and upon the one thing; he gave Susie a beautiful a piece of bread in his hands wait- show real talent in the ping pong confession of the candidate to follow the profession of engagement ring." chemistry or chemical engineering, Phi Lambda Upsilon pledged two science men. DR. W. HOTCHKISS DISCUSSES SOCIAL SCIENCE COURSES

Published in September Issue of S.P.E.E. Journal

Expounding his educational philosophy in the September issue of the Journal of Engineering Education, President Hotchkiss stressed the importance of the social sciences for engineers.

The trends of social sciences that Dr. Hotchkiss mentioned are those which will contribute jointly to professional competence and culture. Culture, according to Dr. Hotchkiss, connotes a many-sided life, and suggests awareness of the world about, intellectual curiosity, and capacity for reflective thought.

The reason why engineering students are critical about the social sciences is chiefly due to the fact that engineering educators have not found out the real objectives suitable for these studies.

Test Social Courses

forth six different methods for test- been added. ing the suitability of social science courses. Among the important considerations are the relevancy to engineering, stimulation of intellectual curiosity, discipline in accurate reasoning, and the drawing of conclu- read "Advisory Council." . sions which lead to action.

The article also includes a discussion of the social sciences as taught at Armour. The selection of material for the social science courses is developed in conformity with the principles which Dr. Hotchkiss outlined.

"Back of every engineering project is a human situation", writes Dr. Hotchkiss. "Engineering activities are inescapably dominated by economic and social affairs."

Develop General Knowledge "No one can acquire a complete knowledge and understanding of these institutions (social, political, and economic) any more than he can acquire such a knowledge of the physical universe," concluded Dr. Hotchkiss, "but the social science part of engineering education can point the way toward a scientific and appreciative attitude which the engineer requires for his work and for his life as an educated citizen.

CANDID KANSAN COVERS WATERFRONT

NO IDLE TAIL

"It was during a student play in Fraser hall at K. U.

"To know the antique structure is to realize the situation.

"One of the cah-rah players was reposing on the 'throne.' Before he realized the time he had taken for his relaxation his cue was given. In near terror the complications overcame him. The 'throne' is one of old type that fairly shakes the building when it is put into action. And it goes into action automatically when the visitor arises.

"The student player's mind was in a whirl-and just then another member of the cast appeared.

" 'Here, quick!' shouted the young man whose appearance on the stage was in demand. 'Sit here-sit heresit here, I've got to go on!"

"The second student, also realizing the emergency, slid into place.

"All was well—that is, well, until No. 2 on the 'throne' heard the play swing along to his cue.

"What was he to do? "Get up and utterly spoil the play

with the roar of water? No, that wouldn't do.

"But he must go on-in a few moments his entrance on the stage was scheduled.

"He heard footsteps. It was one of the ushers.

"'Come here, quick!' he stage whispered. 'Stay here-don't move-I must accept my cue.'

"And he scurried from the little

room.

"The play went on, the last curtain fell and the audience drifted from the hall before No. 3 dared leave his post.

"Unheralded, unsung, without the honors accorded by the Daily Kansan critics, without his name on the program, the usher, Hero No. 3 of our little story, left the building humble but wiser."

MAN WANTED! A Sports Editorial

ganized cheers are of problematical worth at a sporting event. If you do, don't be embarrassed appeared. -most Armour men have at least offered that front in past years. If you felt like cheering, you yelled; if another Techman had the same urge, he yelled when the spirit was upon him.

Now when the WHOLE student body pours into the Armory on December 5 for the opener, are there to be any real cheers? The answer is no, unless some Techawk with a large voice and free moving anatomy appears as a cheer leader! Do we want or need one? Possibly what follows

Last season, the student attendance at Armour games rocketed to a new high when the 108th Engineers Armory became the Tech home floor. Of course more people meant more noise but, as usual, no organized cheers. A game of this and the present civils planned for better. The next game | Spirit" inspire one of us to the great excess of saw—and heard—the better portion of the C. E. offering our services as cheerleader? '36 yelling in strenuous, stentorian, and unified wanted!

Possibly you too feel that a cheer leader and or- | effort. Following games meant new converts, and cheers ne'er heard or used before (women),

> Did the team notice it? Look at last year's record. Listen to what Capt. Al Lauchiskis said of the cheering section.

> "It sounds great to hear you fellows yelling. We're alone on the floor, and we can't see the gallery; but when the going is tough we like to know we're not alone!"

> The University of Chicago game, that session to which every Armour man points with pride, found the lusty lunged cheering section ruining many a dulcet vocal chord in shaming the shouts of the Maroons. The habit took hold.

Sincere efforts by enthusiastic men to organize full cheers had little success, a cheer leader of real talent was needed and is still needed. Unless he appears, the group effort will alone prevail.

When, oh when, will such a thing as "Armour

There will be a senior class SCIENCE NOTES meeting, Tuesday,, December 3, at

A streamer approximately 143,000 miles long has been observed above the sun's equator, on what would be by the Naval Observatory. Also in the northern latitude of the sun is a sunspot group moving as is customary, from east to west. In the southern latitudes are five seperate groups of spots, some of them containing as many as three spots. This aggregation is the greatest outburst of sunspot activity since last summer and seems to have appeared first about two months ago.

Within the next month (the exact date is uncertain) the giant 200-inch glass disc, which will eventually be the great mirror for the observatory of the California Institute of Technology on Mt. Palomar, will be removed from the annealing ovens of the Corning Glass Works. Now at 302 degrees fahrenheit, the huge glass disc is still far above the temperature at which it is safe to remove it from the carefully controlled cooling process.

Recent tests show that inexpensive paper windows trasmit ultraviolet light effectively enough, so that they might be substituted for the expensive ultraviolet glass in some tuber-7.50 | culosis elinies.

Boxers Prepare for Match with Loyola

Severe workouts continue for the might and brawn representatives of Armour Tech as the opening boxing and wrestling matches draw nigh. Although Captain Sramek of the boxers seeks a good bantamweight to make his organization complete, all the old material is back and in good condition, and the freshmen also look promising. The team is looking forward to their meet with Loyola University, the first of the season, which will take place in about three weeks. In Tech's last encounter with

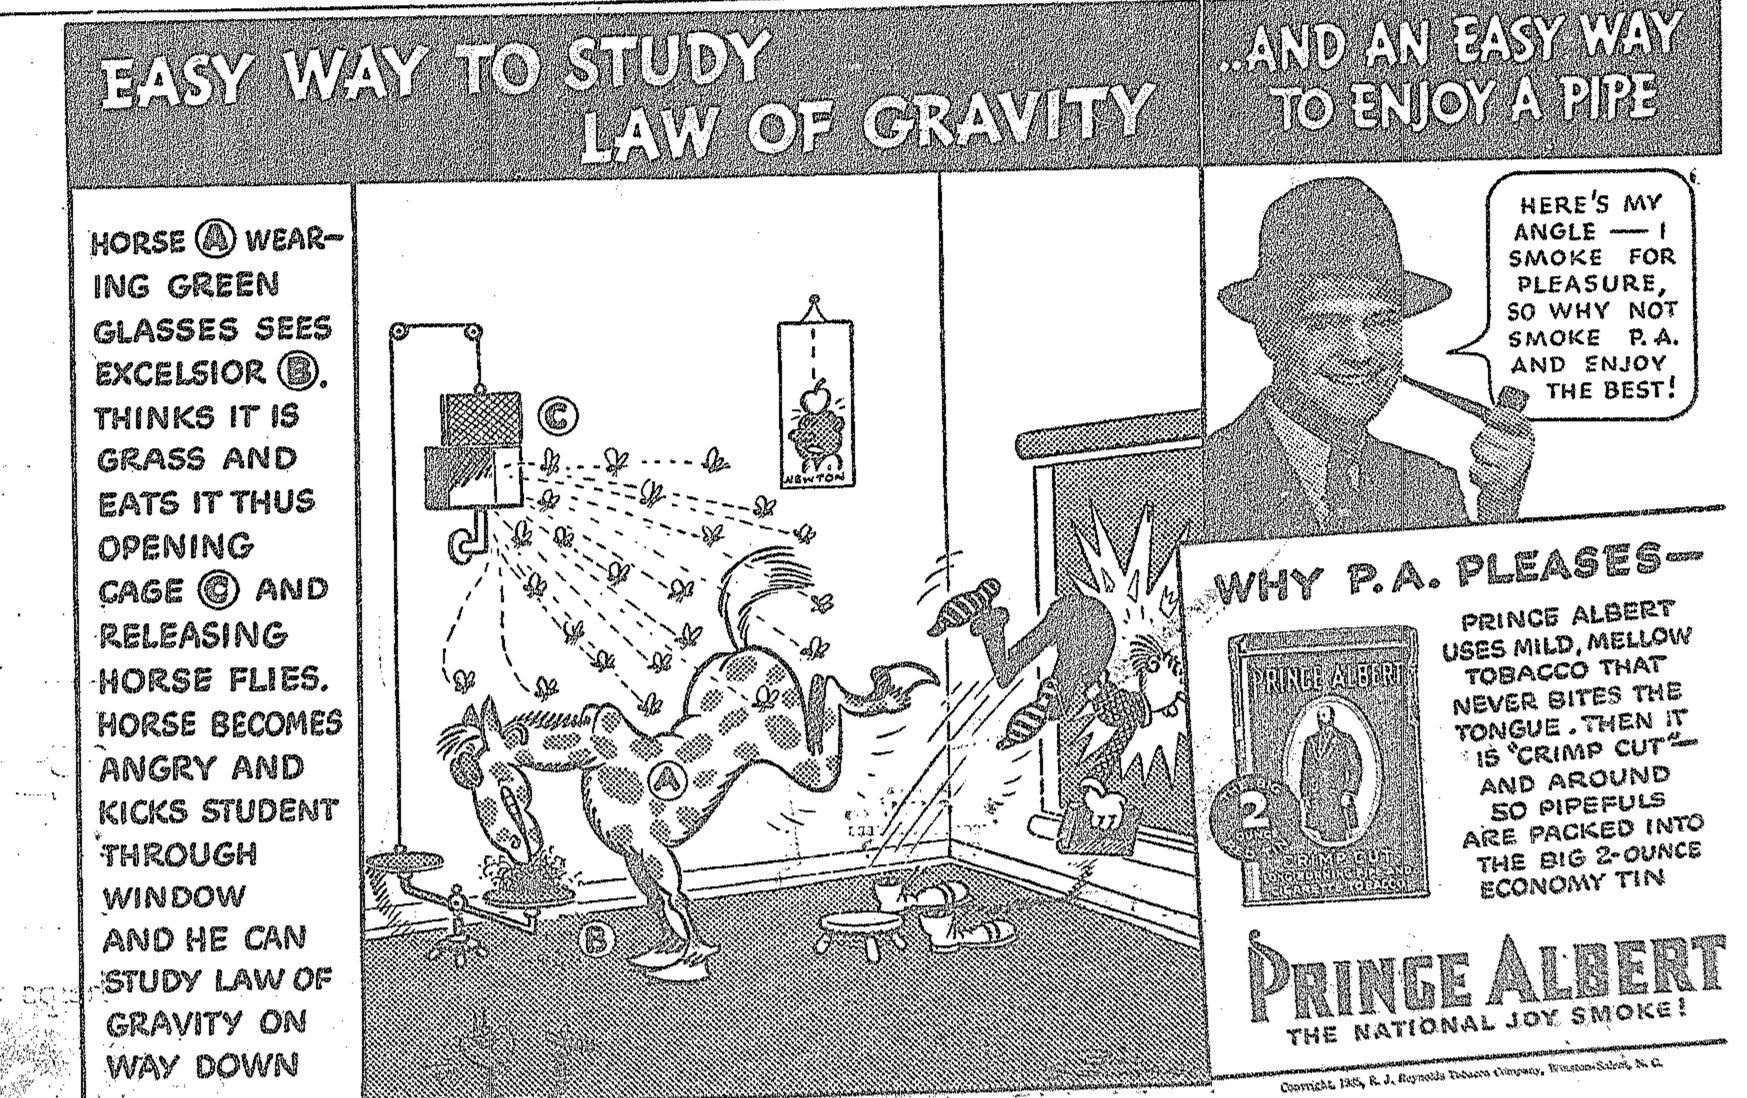

this team, about four years ago, Armour staged a desperate rally and came up from the rear to astound their opponents with four consecutive knockouts to steal the entire match. Only two or three meets were held last year but an extensive program is to be arranged for this

Tracksters Begin PEP MEETING DUE Practice Dec. 2

In the track meeting last Friday, Coach Root and manager Savidis succeeded in doing a lot toward getting the coming track season under way. There was a general discussion about the coming season and its the day of the big game. possibilities which was followed by a distribution of equipment to those upperclassmen present.

During the short half-hour session a good deal was accomplished. New men who showed up were asked to fill out slips similar to the ones filled out by the others at the previous meeting. To those fellows who were out last year and as yet have not showed up Coach Root sent his personal invitation to come out again this year.

Plans for the coming seasonal meets were also delved into. Following much discussion on the part of both Root and the team members precent, it was decided to schedule at least five indoor meets, and the same number or possibly more for the outdoor season. After a discussion and Freshman Ruling Is Hoping for recognition as one of a general vote it was finally agreed to set aside Friday afternoons for as many meets as possible, a time ule of meets with several nearby most convenient for all concerned.
