

Dirty Shirts Invade Campus; Observed on Faculty and Deans

Due to a strike of all laundries in the Chicago area over the week end, Technology Center was bathed in more than the usual dirt and grime today with gray collars and cuffs protruding from well-pressed suits of both faculty and students.

Lone stand-out on the faculty was Sonny "Beau Brummel" Weiseman, who admitted he had salvaged two shirts and was having them laundered by Elizabeth Savage in the ladies lounge.

President Heald, when asked for a statement this morning, pointed out that while a gray shirt could occasionally go with a red collar and tie, yet a dirty shirt never should.

The Chicago Herald-American was generally credited with inspiring the strike, informed sources said today, as last winter they had in a remarkably prophetic editorial started the rumor of an impending laundry shutdown.

"It's all right for them," John Schommer was quoted as saying. "Down in the loop where it's nice and clean they can get past with three shirts a day. But out here . . . well . . . personally, I'm in the habit of filing a day's supply under S and changing every hour."

Members of the V-12 unit seemed singularly free from laundry trouble but were unwilling to explain how they rated priorities on this essential service.

Cure of Corrupted Craniums Can Come Quickly Quote Quack

By Dr. F. J. Quacknamara

Ha young man, do you sit up nights thlking of your next quiz? Of formulas? Of theories? Of blondes? If it's the former you're the one we are worried about.

Your mind has been corrupted! You what? . . . Aw shuddup! I'll tell you what to do from here in. I got your number. You're the kind of a guy what gets pooped after doing a hundred push-ups. Yah! You're the mug whose heart pants after running up to the fifth floor Main. Ya weakling! Ya Freshman! An your face turns red . . . when? Naw, when a skoit goes breezin' by. Just look at cha. Cream puff! An if she ever kissed ya your teeth would come up an gag ya! Shuddup I said!

Now park your fanny on dat dusty seat and listen ta me. (Yah, I feel a sermon comin' on me too.) You've got to delate your curriculum, eliminate the proffessorium, latch on to the pulchritudinum. Ya boy! But don't mess with another man's gal.

Ya got dat shrimp? Den listen furdder. Ya got to dresd proffs up to the maximum, bring studies down to the minimum. Have faith in da Waves liable to walk upon the scene. To illustrate my last remark; when da Waves move in don't go hide in the dark, but find ya a little place to spark.

NAVAL NOTATIONS

Due to the fact that the naval trainees on the Illinois Tech campus have become so very enthusiastic about their work of late, they failed to go out last week-end. Therefore there is no naval notations this issue. This change in attitude has been brought about partly by the more stringant scholastic requirements of the navy but mainly because the men love their work and hate to leave the campus even for a few hours.

Will Build New Assembly Hall

Movies, Sports, Plays can be offered there

The construction of the new IIT auditorium will begin day after tomorrow. The plans have been completed and the materials have been ordered and prepared. The chosen site is at Main Street and Hidden Avenue, which is a short distance south of Armour.

The Acme Teardown Co. Inc., well-known builders of public buildings, have contracted to handle the mammoth construction job. It intends to complete the auditorium by the end of this year, for it will have more than 100 men on the job. AAAA'IAAAA priorities have been obtained.

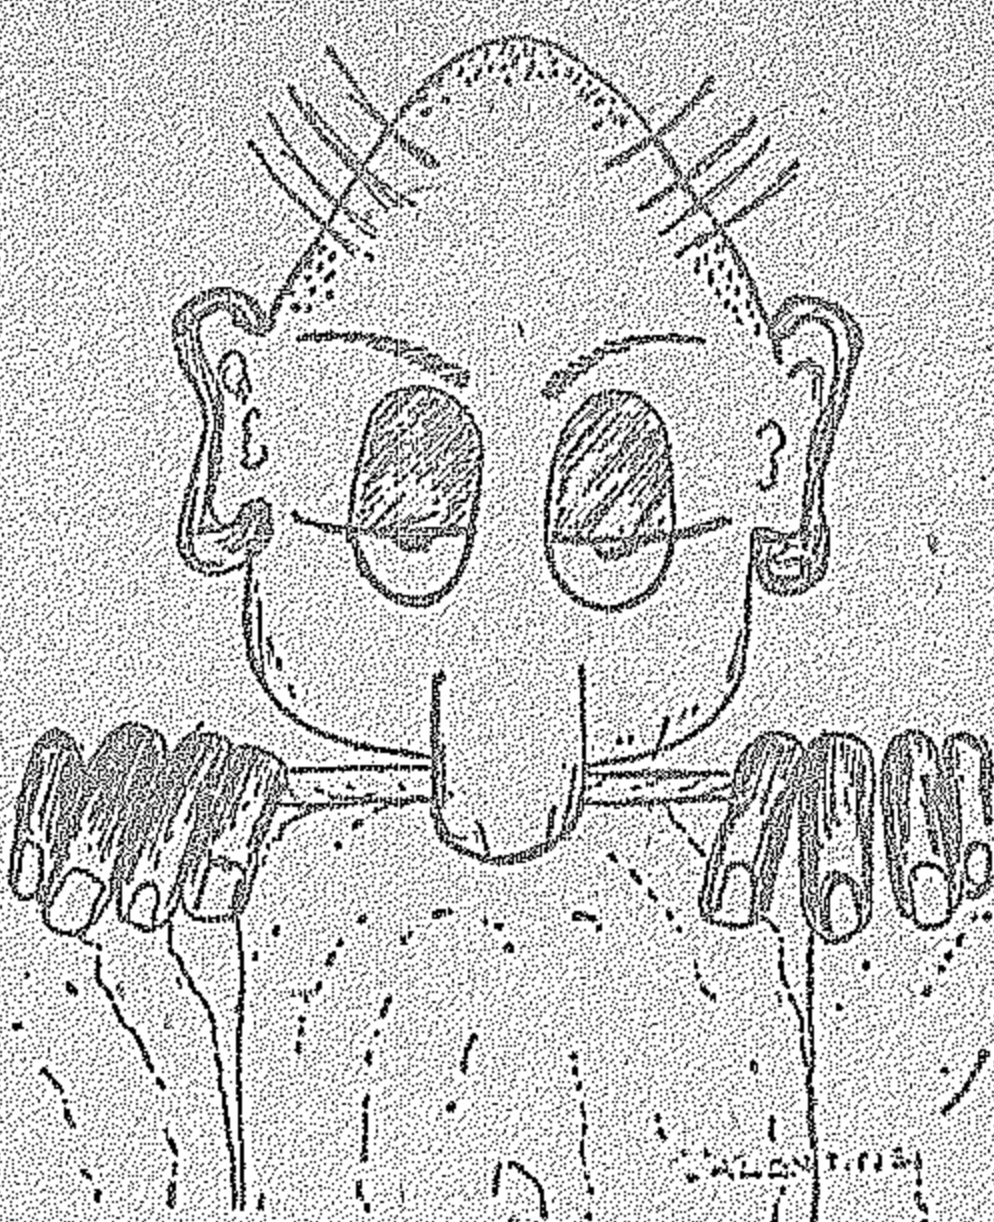

The new building, including all the modern equipment it will contain, will cost exactly \$66.666. An air conditioning unit, movie projection room, and a built-in loudspeaker unit are only a part of its many features. The seating capacity of the auditorium will exceed 1500. The stage, about 50 feet wide, can be used for theater productions, movies, etc. A new feature of the stage is that it may be cleared so that the school's basketball games can be played there. In this way, large crowds can be seated conveniently with no strain upon the facilities of the auditorium.

Glaves Offers Temper Course

by Former Economic Class

Prof. C. R. Glaves, soft spoken member of the Industrial Engineering Department, will offer a course designed to relax the student in the class room. With the coming of spring many instructors have complained that their students are so alert in class that they are worked into nervous exhaustion. Prof. Glaves has solved this problem by allowing the majority of his class to sleep while heated debates are carried on by the instructor and conscious students.

Prof. Glaves has been with the school for many years, and in his stay has come to love the ways of our institution. He always has nothing but the highest praise for members of the staff and many classroom hours are spent in delightful discussion of the mental prowess of the engineer. We know the professor is just trying to build up our morale (no that's not morals—we can spell) but he declares that that no group of students grasp the complexities of business with the ease displayed by the engineering student.

Phenorten Is Student at IIT

J. Tinesly Phenorten, a new student from Mars, has completed his late enrollment and will start classes Monday morning. His grades for the entrance requirement examination were so high that the registrar's office is letting him start sixteen weeks late.

He received his earlier education on Mars and decided that he would like to finish it at Illinois Tech. His main interest lies in the field of electrical engineering, and he would like to obtain electricity in a tangle form.

Phenorton has been spending most of his time on a super atom smash-device which will use the energy of the atom to propell his motor cycle.

The thing that fascinated Phenorton most was the network calculator. In half an hour's time he had it apart. After putting it together he found about 3 million parts left over. With these parts he plans to build an electron-jet propelled coffee perculator.

Another thing that greatly intrigues Phenorton is the electron microscope.

Upon very deep research work on the theta particle of argon gas he found a startling discovery. The theta particle was found to possess body lice.

He claims that the reason he came to Illinois Tech is that he had heard that this school had a large number of beautiful co-eds. So far he is still looking for the large number of beautiful co-eds.

Rational Numbers, Irrational Prof, Make Math Easier

Doc "Willie, the chump" Krathwohl, Professor of Arithmetic Fundamentals and Director of the Department of Illiterate Tests and Measurements, has finally revamped the number system so that π , the Greek letter, and "e", the base of natural logarithms, are even numbers. The Doc says that, with regard to π , the revised system will save all fourth grade students trouble in solving differential calculus problems.

"Heaven Can Wait"—New Navy Quarters Satisfy Sailors Wants

"The spacious new navy quarters will be ready for occupancy next week" announced Lieutenant Royal F. Sessions, today, as he finished an inspection of the pent-house now standing on what was formerly Ogden Field.

"I fully believe that these quarters will be an improvement over the previous housing conditions," said Lt. Sessions. "The navy is trying to have the best possible study conditions for the men stationed here."

The first public examination of the quarters has revealed the comforts the men in the station will be subjected to, starting next week. Each man will have an individual room with hot and cold running water, built in showers, innerspring mattresses, and self swabbing decks. It is contemplated that the 500 Waves, to be stationed in the same building, will act as hand-maids doing such useful things as cleaning stripes and pressing blues.

Together with the change in quarters will be a projected alternation of policy. The trainees will stand no watches and will not be required to make musters.

Morning chow will be served in bed, as morning calisthenics will be eliminated.

Liberty will be granted every day because it is thought that the quarters will be so perfect that the men will not want to leave.

Prof Nash Will Retire Monday

Accepts Job to Rid Chicago of Tribune

It was just announced to a Tech News reporter that Prof. Charles Nash will retire from his position in the electrical engineering to take a position on the Democratic Committee. This position will be of the utmost importance. The duty of this committee will be to see that F.D.R. will run for a fifth term. Prof. Nash's specific duty will be to head the political department of the Chicago Sun. This will be the start of a long battle to wipe the Chicago Tribune from the city streets.

IIT has been honored to have Prof. Nash selected to do such a task that many good men in the past has failed to do. It can be safely stated that the Chicago Tribune hasn't a chance for survival since Charles Nash has been selected for the job.

"A's", No Work Is New Policy

As of April 1, there will be no grades lower than 'A' issued. This of course is done to relieve the students of work. Instead of study hours for the civilians and watches for the navy students, there will be free refreshments in the cafeteria at any hour.

With this regime it will be possible for the huge number of students to become acquainted with their surroundings.

The bookstore will be open from noon to one o'clock with an hour for lunch, this enables the few people who desire some amusement to gawk at text books.

Of course there will be some work. Armour must live up to its standards. As an added attraction tuition will be paid to every student enrolling here.

We hope this new standard set up for IIT will not prove too rigorous for its many inmates.

ERUNAM

The new vitamin compound guaranteed to fix what ails you. Take in one pound doses twice a day; it will make you strong as a horse.

Embassy Visits South Campus

The Chicago Embassy of the Hellensoot government recently sent a delegation to visit Illinois Tech. General Boris Freud, military leader of the small country, Corporal Bruce Longtin, his most trusted aid, and the Honorable Reverend Harry McCormack, Great White Father and spiritual leader of the puppet government accompanied Freddie Richter, propagandist, on the expedition.

The country of Hellensoot was so named because the thirty-first and thirty-fifth longitudes intersect there.

General Freud was amazed with the cleanliness with which the dust settled on the library books and chemistry equipment located in Main, the capital. Meanwhile, Corporal Longtin relaxed in the lounge causing the secretaries to gasp at his beautiful body and uniform.

Richter spent most of his time teaching members of the faculty his native language. He also demonstrated some of his modeled works of art including "Orcutt Malnutrition," his greatest. Converting students into his plastic sect occupied most of Reverend McCormack's free (Continued on Page 5)

Students Hard at Work
