### es I see III-

by HOWIE BUM, Editor

Each year Technology News, in line with its 'if it's in Tech News, it's true' policy, courageously prints the facts about HT. It's not a pretty picture we paint on these pages today . . . but we bring you Illinois Tech as it really is, shocking, but . . . well it's in Tech News, isn't it?

In line with this bold policy I am about to unveil to you an expose of the multitude of schnooks that hover around an editor's well chewed out body. These despicable characters fall into 3 general types; (1) The 'Listen Here, Buster!'; (2) the 'Coy Professor.' and (3) The 'Brother you've never had a story like this.'

The 'Listen Here, Buster!' type is generally a guy about 6 ft. 10 in. tall, with shoulders almost as wide who approaches with the above words. After picking up your poor, trembling body he proceeds to gruffly inquire why the dandy story about his Society for the Preservation and Advancement of Sideburns didn't get in. They had had an election 8 weeks ago and IIT should hear the glorious results! "After all, there are \$182 potential members . . . all we want is a little space in that rag, one half page would he fine "

Perhaps the cutest is the 'Coy Professor' type. He's the guy who comes barrelling down the hall in Chapin leaving bruised and battered bodies in his wake, dashes up to you and pants, "Hello there, what a coincidence meeting you here. Oh, by the way, I have a little item I thought you might like for that splendid paper of yours, heh-heh. You know I was recently elected president of the American Society of Equation Jugglers and Radical Liftcough-cough. I thought you might like to have a little story on it. And, oh yes, it just so happens I have a picture you might use! I kind (See AS I SEE IT on Page 8)

### Alter Building Plans Again

Professor Miles on der Road, glorified civil engineer in charge of Illinois Techt's building program, announced that plans for the new structures would be radically changed. Abandoning the greenhouse type of construction, the buildings will be completely without glass. Unlike Alumni Hall, the Chemistry and Metallurgical Engineering buildings will have no windows, no doors, and no glass walls. Students will enter by osmosis. On der Road says that, in spite of these new innovations, the buildings will be comfortable. Fresh air will be pumped in from the Chemistry labs, and sunght in the property of the compositions of the pumped in from the Chemistry labs, and sunght in the property of the control of the

Instead of being built on stilts as originally planned, the new buildings will be built underground, and will be entered through gopher holes in Ogden Field. "Just take the first rut to the left, and you can't miss them." Prof. on der Road instructed. Realizing that the Techawks would become lonesome for the old buildings, the new classrooms will be made "nostalgia-proof". This will be done by a special machine which will shake the buildings and blow soot into them, thus insuring that IIT students will not become homesick for Machinery Hall and Main.

Prof. on der Rond also announced that Ogden Field would have to be paved, as a safety precaution. He stated that several engineers had attempted to cross the field, but their slide rules came back without them.

# Maniac Captured in Chapin Hall

Parking Problem Solved!

NO MORE PARKING TROUBLES—Adequate parking space on the liT compus was today assured when the roof of the Motals Research Building was opened as a parking lot. "This is the first in a sories of new buildings to be used for parking lots, being that they are ideally suited for the purpose," said Welter J. Pardon, head janitor. He added that the sloping roof of Main building will be reserved for new Studebakers, since you can't tell which way they are going therefore gravity will have no effect.

# 10,000 Day Students Expected To Attend IIT This September

Ten thousand day students are expected to be in attendance at Illinois Tech during the fall semester, Down in the Valley, director of the Admissions Office, stated today. Citing that revised estimates of the capacities of the new temporary build-

ings have exceeded all expectations, Mr. Valley said that the Industrial Engineering Department has completed plans for scheduling of classes and utilization of space so that every building will be able to accommodate a maximum number of students at all times.

Among a few of the more ingenious ideas developed by the IE department are the following:

No outer garments will be allowed in the buildings. Racks for clothing and briefcases will be provided at convenient locations in the middle of Federal Street.

Classes will begin at 6 a.m. and continue until 8 p.m. and breaks between classes will be cut to five minutes in order to make the best use of the hours available.

Instructors will take turns presenting their material so that two classes will be able to occupy each classroom at the same time. Programs will be arranged so that students may take two subjects during the same hour and thus occupy less space during the day.

Because of the estimated 80 to 90 students in each class, it will not be possible to have seats in the classrooms. Standing room will be assigned.

Textbooks will not be used—instruction will be by lecture only and written work will not be required.

Paul Thompson has switched to Chesterfields because Chesterfields are dandy.

## ITFSA Founded To Aid Students

One of the reasons for the formation of the Illinois Tech Foreign Student's Association was to help foreign students having difficulties with their studies. The studies here are rough enough without having them taught in an unfamiliar tongue, so the foreign students were at a disadvantage.

The faculty, in their usual shrewd manner, took note of this and, being true sportamen at heart decided to handicap American students in some way in order to even things up. After long and careful study of the situation it was discovered that no students registered at IIT were from Greece and furthermore no one on the campus could understand or speak Greek.

The beetle-brows of 33rd and the tracks immediately recognized the solution to their problem and started teaching classes in Greek.

Just recently it was discovered that in some way two Greek students had infiltrated into the Ogden Pield salt mines and could almost understand what their instructors were talking about in their Americanized version of Greek, For a few days the faculty was at its wits end groping for some way to combat this new menace to their prestige. Fimally, following the same train of thought, the faculty hit on the ancent Egyptian language.

This summer all instructors will study Egyptian and next semester classes will be taught in it. It has not yet been decided whether or not homework will be written in hetroglyphics.

### Six Orderlies Hurt in Struggle To Restrain Faculty Crackpot

Student's Complaint on Whisker Alterations Brings State Hospital's Attention to D. P. Nodar.

#### Less Board Space In SU

#### Wiseman Triumphs In Long Battle With ITSA

In a heated discussion at the recent TFSA meeting, it was agreed that additional bulletin board space should be given to student activities. Sonny Boy Wiseman, director of the Student Union then gave the ITSA permission to put up a new board in the lobby, but added several limitations as to its size and use.

The size of the new board shall be not greater than three square inches. This was considered by Wiseman as the median between what the students wanted and what the school was willing to give. In addition, the board shall be used only between the hours of 1 and 2 a.m. and only by those organizations with nothing to announce or publicize. Considering that harsher restrictions on the use of the board were suggested by Wiseman as representative of the school policy, these regulations were considered the most convenient for all concerned.

The new board shall be placed in a conspicuous place in the SU loby directly behind the space already provided for this purpose. Any organizations with nothing to say should leave a note in the ITSA box in the post office in the SU lobby and a place on the new board will be made for their notices.

#### New Equipment for Chem Dept Received

Dr. Bruce Longthing, associate professor of chemistry, has announced the receipt of newly developed fire extinguishers for the chemistry department.

The extinguishers consist essentially of a system of overhead tracks attached to the ceiling which will permit a container, which comes in various sizes, of water to slide back and forth freely overhead. The operation is quite simple. For example: a small fire bursts out in a beaker and starts to spread over the desk. The student immediately presses a button which sends an electric current to the tracks and directly to the container of water. From the base of the container, magnetic vibrations are set up from the container to a magnetic pencil in the instructor's pocket. These vibrations are strong enough to aftract the container to a position above the instructor, releasing a catch at the bottom of the container thus drenching the instructor.

While he is busily drying himself off, the student has enough time to obtain the carbon dioxide extinguisher and put out the ine, thus diverting the instructor's what's and ser sequent lewering of crade. The invention is puriociarly anaptal to organic chemistry labs.

In a lightning move last night, the agents of the Illinois State Hospital (Dunning) brought into custody Dr. D. P. Nodar, of the psychology department of Illinois Tech.

Parking their cars in front of Chapin Hall, several little men in white crept around to the back and up the fire escape to Dr. Nodar's office while a number of orderlies, internes, and doctors crept stealthily up the front staircase. When Dr. Nodar's office was broken into, the agents could see the type of mentally twisted maniac they were sent to capture. There in his sound proof laboratory, was all the evidence that was needed to commit him to the state hospital under strict physical restriction.

The lab was designed along the lines of a blacksmith's shop—a red hot furnace in the corner and a huge anvil in the center of the room. And there, beating super-thin recorder wire out of one inch tool stock, stood the madman himself.

Dr. Nodar's appearance had changed completely. Gone was the pleasant look, and there in its place were two eyes of dell red, set in sockets of black. His gaze beat forth like the fire in the furnace and his motions were those of an automaton.

Two men caught Dr. Nodar before he could adjust himself but failed to hold him down. Six orderlies were needed before they got him safely straight-jacketed and on his way to the hospital for the insane. Several of them were injured and went back in the same ambulance.

For several months the anthorities had been aware of Dr. Nodan's mental condition but they hesitated to do anything until his actions warranted it. Vesterday afternoon the state hospital received a call from a student at IIT demanding an investigation. According to the hospital's records, the student had been forced to eat rabbit bladders in an experiment to determine if he would grow rabbit fluzz on his chin instead of the usual whiskers.

Dr. Nodar is the author of several papers on the treatment of cases like this and it is interesting to note that the state hospital has been using his methods for several years with varying degrees of success.

#### Jane Rassell Scholarship Established Here

At a seminar in spherical and conical trigonometry conducted under sponsorship of the mathematics department yesterday, Mr. H. F. Efficient, with a superior of the Young Maiden Form Company, announced a new scolarship to be offersed HT students. The new scholarship will be spousored by the Jane of HT students and will include theory and practical applications, whiching stup tilms—opps, film strips—as a consistentions to further daylog the creates the first section of the control of the strips—as a consistential to further daylog the creates the first section of the control of the section of the sect
