

GEORGE CUMMINGS BURGE, Mechanical Engineering.

Tau Beta Pi.

Senior Mechanical Society; Class Bowling Team.

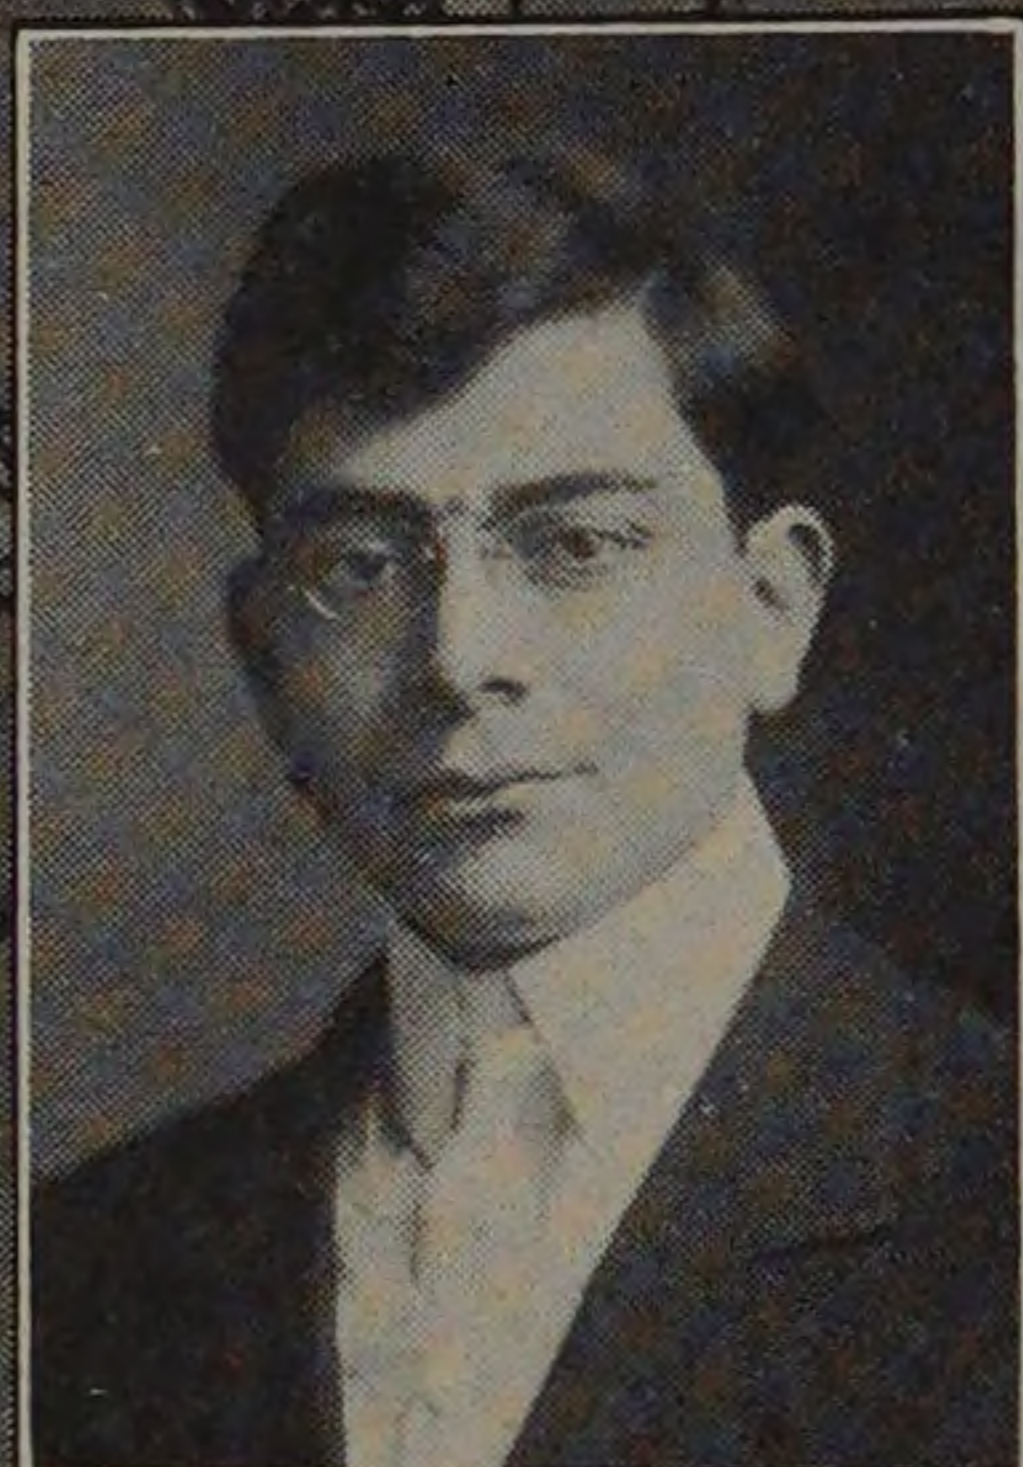

Behold a pleasant-faced Puritan from New England! George was born in Nashua, New Hampshire, on April 29, 1885, and graduated from the city high school in due course of time; but somehow he decided that Armour offered more opportunities for the study of power plants and such things. He knows a great deal about power plants by now, and was so busy testing one of them that he finally had to put full steam on to get in the Senior section of the *Integral* at all.

CLAYTON FRANCIS BUSSE, Mechanical Engineering.

Senior Mechanical Society, President (4); Mandolin Club; Class Baseball (1) (2) (3) (4), Manager (4); Class Basketball (4).

This Mr. Busse, the forty-second cousin of our distinguished mayor, was born and raised in Chicago—September 22, 1884, being the date of his appearance. After getting the best subjects the Northwest Division High School had to offer, he went to Lake View High and finished in 1903. Like many other fellows, he chose the technical profession and came to Armour to become a Mech. Here his career has been somewhat varied, he being interested in athletics, politics, music and the drama. He is noted principally for his rendering of the late popular airs on the piano in Engineering Hall and for the success with which he has run the Senior Mechanical Society.

JAMES CAHAN, Civil Engineering.

Cahan is not an anarchist, even though he does hail from Warsaw, Russia, where, according to Chicago journalists, every second man has a bomb under his coat. In spite of troublesome times, he managed to graduate from the Technical College of Warsaw in 1904 and then came to the 'stute to enter the Sophomore class. Since his sojourn here, as he says, he has been a little stressed by the numerous high stresses, but notwithstanding this, Mr. Cahan will go through a-flying.

JAMES CERNY, Civil Engineering.

Civil Engineering Society; Class Football Team (2).

Although Jim was born in Bohemia about January 6, 1886, he never was a relative of the great composer who was so unfortunate as to bear the same name. Cerny should have been a hobo for he utterly refused when requested to get under water in a caisson. On another occasion, he showed his resentment for water by collecting accident insurance when the water lens exploded and a little hot water touched his hands.
