

AN ARMOUR INSTITUTION

THE SUIT CASE!

Some time back, in the annals of the Institute, the *habit* sprang into being. Whence it came, no one knew. It just created itself from the atmosphere of the place. Foreign travelers came here, saw the multitude of Armour men—each with his "suit-case,"—and they marveled. No where in all their experience had they seen college men carrying "suit-cases," in which to convey their books. It spoke well for the learning of the Institute, at least for the quantity of it.

No lesser personage than President A. T. Hadley, of Yale University, dwelt with emphasis on the "suit-case" habit of Ar-

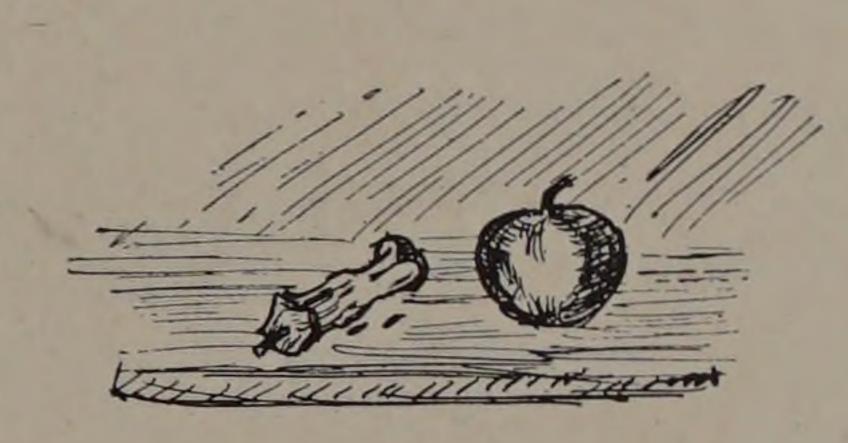

mour men. He said at first sight he wondered what the customs of the school might be that every student carried his evening clothes with him.

Since that time, the *habit* has spread far and wide, for it is more than a fad; it is a great invention of some true engineering mind—to fill a practical need. If manufacturers, who have reaped such a benefit, would only sell it as the "Armour Trunk," they would be but giving due credit to its source. Despite its fame, the "Armour Trunk," whether it has become so numerous or no, has fallen into disfavor with the authorities, for they issued an edict against its being checked in the cloak room and leaving it in the halls. Alas! such is the fate of Armour's most famous institution.

"Getting His Meals Outside."
