

GEORGE G. GOHEEN, Electrical Engineering.

Armour Branch A. I. E. E.

This sunflower came to us at the beginning of the year to take some real electrical engineering work. Originally he was born in Manhattan, Kansas, on July 17, 1887, and in due course of time took a degree of B. S. from the Kansas State Agricultural College. We fear that he hasn't altogether too much respect for the bulletins which that department requires, but, notwithstanding, he has been able to absorb quite a bunch of interesting facts about electrical matters, and will return to the Kansas plains to furnish the natives with the modern conveniences. While here he has been a credit to his old Alma Mater, and to his adopted class as well.

GEORGE ARMITAGE GRASSBY, Mechanical Engineering.

Tau Beta Pi.

Mechanical Engineering Society; The Sphinx; Assistant Editor Integral, 1908-9; prepared at Armour Scientific Academy.

Gog, or Grass, is an Americanized Canuck, having been born in Toronto, October 30, 1887. Early in life he showed a tendency towards tinkering with wheels, and lately has become a motor-cycle shark. What he doesn't know about them is hardly worth mentioning, and the Grassby motor-cycle is considered the speediest and most reliable machine on paper ever devised. As a student and straw-boss of the mechanical department he has no rivals, and as a Wednesday night queener he has no peers. His learned discussions on entropy before the daily 8:30 class have always elicited the fervent "Quite so, quite so" from Bowser, of whom he is a special protege in thesis work on the effect of high compression on a gas engine.

JACOB FOY GUTHRIE, Electrical Engineering.

Armour Branch A. I. E. E.; prepared at Wendell Phillips High School, Chicago.

Our friend "Lanky" Guthrie comes from the land of Ade and McCutcheon, being born in Carroll County, Indiana, Sept. 22, 1886. This hoosier only stayed there long enough to see that he was not cut out for an author, and navigated to Chicago. During his early life he was closely associated with artists and geniuses and the like that made a great impression on him. Consequently, he is a very quiet and retiring soul, who is always present at doings, but seldom breaks his sphinxlike silence. Mr. Guthrie is not what would strictly be called a ladies' man and has been seen to get fussed when speaking to the librarians, but he always seemed perfectly competent to take care of himself in all emergencies.

LEONARD O. HAGERUP, Architecture.

Atelier; prepared at North Division High School, Chicago.

This extremely quiet, sweet-tempered chap was born in Chicago, January 27, 1887. As a noise-maker the youth was a total failure, so he was sent to the quiet atmosphere of the down-town annex of the "stute" to splash colors and draw variegated drawings which by courtesy are termed designs. Unlike most of his fellows, the young man is not often seen in Flirtation Hall, nor in the many cosy corners which abound in that edifice of art. Leon has absorbed his full share of architectural information, and will be there with the goods when the baccalaureate sermon is delivered in May. Many of his ideas of beauty are being expressed in his plans for a country club, whose members are of unlimited wealth and whose grounds are of unlimited extent.
