

# The Golf Tournament

The fall golf tournament, which was held on the Jackson Park course, proved to be a great success. The committee in charge consisted of Tobias, Shafer, and Prof. Leigh. Sixteen men were entered, and their handicaps ranged from Vynne, scratch, to several twelves.

The Physics Department had the tournament well in hand, as Wilcox (aided by a well-regulated crib of eleven strokes), was the victor, and Knowlton the runner-up. No doubt these gentlemen made exhaustive research into the theory of elastic and inelastic impact, and performed numerous experiments on this interesting subject in the Physics Parlors before the tournament started. Whoever could beat out Watson at his own game, anyway?
