

INTERESTING SCIENTIFIC NOTES

The chances of holding a pat flush are 1 in 25,377. On the twenty-five thousand three hundred and seventy-seventh time nobody else stays in the game.

A dog wags its tail forty-eight times to the minute when it is glad. By keeping cool and counting the wags you may know whether or not to approach a strange dog.

There are stars so distant that it requires 50,000 years for their light to reach the earth. Also the light is so dim that it would not be useful for illumination even if we waited 50,000 years.

THE LIMIT

"Carson's the absent-minded chap I ever saw."

"What's he been doing now?"

"This morning he thought he'd left his watch at home, and then proceeded to take it out of his pocket to see if he had time to go home and get it."
