Sub-Marshal Junior Week, Class 1911
Chairman Picture Committee, Class 1911
Assistant Editor Fulcrum (2)

LeRoy David Kiley, Editor-in-Chief of the '09-'10 Integral,—has an imposing sound doesn't it? And to think that a five foot rule placed on end could look down upon it all! The "long and short" of it was never better illustrated than it was at Armour while the above mentioned Integral was being issued. At that time, the most familiar sight around the school was the six-foot-two-195 pound Business Manager striding through the corridors with the four-foot-seven-95 pound Editor-in-Chief vibrating at his side. The conditions, however, were reversed when it came to giving orders, for there LeRoy D. Kiley is supreme, and few there are who dare disobey his imperious demands. On receiving some instructions from the Editor, the above-mentioned Business Manager used to jump as if his old friend Corning were after him. For some months past, Kiley has been gratifying his desire to boss people three or four times his size by employing Bohlander to do the cranking and other heavy work on his thesis. Bohlander agrees with Todd that Kiley is a hard boss.

The subject of this article was fortunate enough to be born in Chicago and has for twenty-two years been celebrating May 28th in commemoration of that event. He spent the first three years of his life in growing and then, having decided that he would waste no more time in such an unnecessary occupation, he started out to do things, and do he has. He graduated from the A. S. A. in 1907 and entered the Tech as an Electrical the following semester, but changed to the Mechanical course in his junior year. In order to vary his experience, he has worked for a different concern every summer for four years.

Kiley is a man of considerable energy and great originality, and, from present prospects, it would seem that, as a patent lawyer, he will more than "make good," and, although it is strictly against our rules to insert advertisements in this part of the book, we will take this opportunity to advise all Armourites patenting any kind of perpetual motion machine, to let

Kiley take out the patent.
