President  
 Vice-President  
 Secretary  
 Treasurer

The Chemical Engineering Society was organized during the winter of 1903 and since that time has been steadily growing both in membership and enthusiasm. As in all other similar societies the fundamental object was to foster talks on practical questions relating to the chemical industries both by men engaged in actual practice and by student members of the society. Several interesting papers prepared by student members are kept on file in the Institute library.

The society met for the first time of the year on September 30 and at that time it was plainly evidenced that the current year was to be the most successful one of which the society could boast. A constitution was drawn up to replace one which had long been forgotten and the plan of having monthly banquets was soon cast into the past. The policy of the society as remodeled, was then to have meetings every two weeks and to have these meetings featured for the greater part with talks by the students and also members of the faculty. There is no better time to laud the success of this policy than now and we must say that all of the talks or papers which have been presented were carefully worked up and this no doubt has been the secret of keeping up the lively interest.

The annual banquet of the society was held on January 23, 1914, at Kuntz-Remmlers and was a success in every way. After the "eats" Dr. Gudeman delivered an interesting talk on "Food Law Administration."
