

## B. S. IN M. E.

STANLEY H. BARCE

Born May 22, 1899, Chicago, Ill.  
Fenger High School.

"Efficiency and Capacity Tests of a  
Harrington Chain Grate Stoker."

T. B. II., A. S. M. E.

Barce is a man who speaks but few words, but one may well reckon with those which he does use. His straightforward, clean cut manner has won the respect and friendship of all who know him. A keen sense of analysis, a ready wit, and a forceful personality assure to make this man a true engineer.

HARLAN W. BIRD

Born May 24, 1898, Chicago, Ill.  
Nicholas Senn High School.

"Design of an Automatically Controlled Fuel Vaporizer Using Exhaust Gas."

A. S. M. E.

"Birdie" is our gasoline engine expert. He knows automobiles from shock absorber to "hot spot," and when he is driving his big Studebaker, he judges clearances by the fraction of an inch. Next to autos, his favorite hobby is Michigan Boulevard on a Saturday afternoon.

Harlan is a good worker, too, and this quality combined with his striking originality and disregard of precedent will stand him in good stead later.
