

LYMAN DIXON JUDSON

Born July 19, 1895, Benzonia, Michigan.

Benzonia High School, 1913. Hillsdale College, '13, '14. Carleton College, '15 and '16.

"Heat Transfer in Cooler Coils."

Σ. K. Δ.; Φ. Λ. γ.; A. Ch. E. S.

Since it is difficult to discriminate between benzene and Benzonia, we will let Judson do that. We never knew of Benzonia until Judson put it on the map for us but we know now that it's there to stay. "Judio" let things come as they would at the Institute and mastered them all. Like many of the seniors, he was not afflicted with any form of brain fever but his work counted and he let nothing slide. In short, he was a man who could execute and had a mind to contrive.

HILTON KAPLON

Born December 30, 1896, Chicago, Ill. Crane Technical High School, Crane Junior College.

"The Production of Chromates and Dichromates."

American Chemical Society, A. Ch. E. S.

Kaplon's ability has manifested itself again and again, and along lines of organization, the G. H. G. speaks for itself. Besides being a superb organizer, he is a real worker and believes in taking his vacation after his work rather than before as has sometimes been the case among seniors. There certainly was nothing lacking in "Kap's" nature as he was always in the best of spirits and took a keen interest in his work. He was a faithful standby and a general source of information in the lab. Whatever he does when he leaves the old Alma Mater will always be to its credit.
