

RAYMOND K. SCHERGER

Born May 14, 1899, Ithica, New York.  
Englewood High School.

"Determination of Benzene in Commercial Gasolene."

B. Φ.; A. Ch. E. S.; Glee Club, 1918-20; President Y. M. C. A., 1919-21.

Scherger was one of those easy going fellows with ne'er a care to weary his overworked brain. He approached very near to an ideal scholar when it was possible to run a boiler test by sitting on a chain smoking a cigarette. Outside of his thesis, his most difficult problem was finding a remedy for study, which no doubt is a dreary thing. Many would that he had found it but all his diligence failed to produce results. He surely was good-natured and well liked by his classmates, and did much to keep the Y. M. C. A. going with increasing success. Whatever he undertook was done with a thoroughness and completeness which resulted in highly commendable work.

CORNELIUS SIPPEL, JR.

Born October 2, 1900, Chicago, Ill.  
Loyola Academy.

"Formation and Properties of meta-Benzene Disulphonic Acid."

Φ. A. T.; Honor "A" Society; A. Ch. E. S.; Varsity Basketball, 1919-21; Interclass Basketball and Baseball, 1917 to 1920; Social Committee, 1918-20.

With Sippel goes another veteran of both the chem. lab. and the basketball team. He had an ambition for doing things and to be among the first, and his activities easily show his success. His spare time was spent with athletics and because he knew how to make his time count, he succeeded in getting by without a loss. He was the old reliable on the squads to which he belonged and showed his value repeatedly.
