

Noah: "I've worked on this play for over two years, and I want your honest opinion about it."

Gray: "All work and no play, old dear."

Kelley: "Do you like codfish balls?"

Kenrick: "I don't know, I never attended one."

Noah: "Do you like girls with blue eyes?"

Little: "No, I like girls with green backs."

Prof. C.: "How would the electric lines, where the rails are welded together, take care of the expansion in these rails?"

Voice from the rear: "Have a vacant lot at the end of the line."

We all agree that this is a practical suggestion.

Prof. C.: "Mr. Herbst, how would you correct the sentence, 'That's a peach of an auto you've got there?'"

Herbst: "I would change it to read, 'That's a nifty boat you're dragging around with you.'"

Herbst explains that his correction is based on the fact that 'peach' is archaic slang.

Prof. M. says, "Zeno said that all Greeks were liars. But Zeno (not the chewing gum magnate) was a Greek." What can you deduce from these statements? If you get the correct answer without outside information the Institute will confer the honorary degree of R. S. V. P. upon you at the next commencement.

Prof. C.: "How do you explain the phenomenon of super-cooling of liquids?"

Herbst: "Well, the solution is cooling so fast that it can't stop itself before it goes below the freezing point, and then it goes back and freezes."

We move that Herbst be made a full professor in the department of Natural Phenomena.

Prof. W. (demonstrating a proposition): "Well now, here's where the joke comes in."

Door opens and Bose walks in.
