

THE ARMOUR INSTITUTE OF TECHNOLOGY BRANCH OF THE
AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS

R. B. BURNS *Chairman*
L. E. GRUBE *Secretary*
E. B. MUESER *Treasurer*

The Armour Institute of Technology Branch of the American Institute of Electrical Engineers was installed February 26, 1903, by the national organization. The purpose of the branch is to give the student of electrical engineering an opportunity to hear and to meet men who are prominent in the profession, and to enable him to discuss, or even prepare, papers upon subjects of a technical or electrical nature.

Through the "Journal" the members obtain information concerning the interesting papers given by the members of the national organization, in addition to the description of everything recent in the electrical science, both in theory and in practice.

Many notable papers were presented to the Society during the year, and the attendance at all meetings proved very gratifying. The event of the year was the annual smoker given in the Armour Y. M. C. A. on December 2, 1921. Mr. E. S. Hurd, of the American Welding Society, was the speaker of the evening, giving a very thorough and explanatory talk on electric arc welding.

The talks given by the students were of great interest and were greatly appreciated by the large number who attended. This has, no doubt, been the most successful year of the Society.
