

ENGINEERING SOCIETIES

A. I. E. E.

The Armour Electrical Engineering Society, as a branch of the mother institution, The American Institute of Electrical Engineers, has been a leading society ever since its creation here at school. This institution, like the factor, electricity, upon which it is based, has shown itself to contain an unlimited resource of power. Like the great dynamos which, driven by means of the rivers' torrents, convert a natural supply of energy into boundless electrical energy, so have we, working silently, steadily, with crude, plastic, unmolded material developed strength and character in men.

The Society has been able to carry out its purpose by means of first, allowing its members to come in contact with prominent men now active in the profession, with the opportunity of hearing these men talk upon subjects of the day, and second, by expecting the members of the Society to prepare and present papers of common interest to the Society as a whole.

During the past year we have had several speakers who have delivered lectures to our branch. These speakers were carefully selected, being men who were known to be well qualified to speak upon their respective subjects. Among these men were the following:

Mr. W. Bailey, of the Business Research Corporation of Chicago, who spoke upon "Investigations and Reports." This lecture gave us an insight on how reports of a technical nature are presented to a committee.

Mr. R. V. Hagen of the Illinois Bell Telephone Company, in a joint meeting with the Radio Association, talked to us upon the interesting subject of "Wired Wireless."

Dr. John F. McNamara, the medical advisor of the Armour Institute of Technology, brought to our minds methods of first aid in his lecture, "Artificial Resuscitation and First Aid."

In addition to the technical development of the members, the social development has not been overlooked. The social program consisted of two smokers, one in the fall, managed by the Senior Electricals, and the second in the spring, under the tutelage of the Juniors—both of which were conquests.

However, of all the affairs of the year, no small credit is due the Professors of The Electrical Department for their help in making them all into successes, and we wish to express our thanks to them for the interest and help that they have so willingly given.
