

# In the Operation of Any Steam Plant

- Coal**—
- that is properly cleaned.
  - that is of uniform quality.
  - that has the ability to carry the plant load.
  - that is of the size and grade best adapted to the equipment used.
  - that contains the maximum available heat units per dollar invested.
  - that is not cramped by transportation facilities.
  - that is backed up by a reliable concern with adequate resources.

## *must of necessity reduce the cost of steam*

Coal of the character described is supplied from Peabody mines to industrial plants in the middle-west by millions of tons annually.

The explanation of our ability to satisfy the demands of buyers for clean

coal and dependable, all-year service is found in our exceptional resources—thirty-six large mines, served by nineteen railroads, developed and equipped to produce 1,574 fifty-ton cars of coal per day.

*Safeguard your fuel requirements with a  
Peabody contract—the utmost in protection*
