CLASS OF 1935

'Tis time for us, the Seniors, to reminisce. For four years, our lives, our hopes, and our plans have been devoted to trying to attain that goal of all college students—Commencement. May we be granted the privilege to glance back into the past and again remind ourselves of some of the triumphs and failures, the work and play of this, the class of '35.

On September 21, 1931, a group of two hundred and seventy Freshmen entered the portals of Armour Institute of Technology to acquire a knowledge of many engineering and cultural subjects. We spent our first few months of this year in becoming acclimated to the newness and strangeness of college life. The earnestness and brotherly interest of the faculty and the absence of strict high school discipline soon gave us confidence in ourselves and instilled in us the desire to attain our goal. The Freshman Handshake aided in acquainting us with the upperclassmen in whose footsteps we were to follow, while the Freshman Smoker and the Frosh-Soph Informal helped to create good fellowship. These two events were both novel to the social calendar of the Institute, being inaugurated by the class of '35. A victory over the Sophomores in the class rush and an interest in athletics, music, and literary work relieved somewhat the monotony of study during this momentous year. Social fraternities claimed the attention and interest of many of us.

The habits of correct study aided us materially in successfully completing our Sophomore year. Although the work was much more difficult than that of the Freshman year, we were able to overcome it and in addition take a more active part in outside activities. As Sophomores we won the Interclass Basketball Championship while losing the interclass baseball title and the class rush by small margins. The Frosh-Soph dance of this year proved to be as successful as the initial one. Many of this class now earned places on the athletic teams, the staffs of the literary publications, and in the orchestra and glee club, showing that they recognized the value of a well rounded curriculum to a finished engineer.
