

HENRY TOWNLEY HEALD

Since the earliest days of Armour Institute of Technology, it has been the purpose of the Institute to provide all students, who care to apply themselves, with an engineering education grounded in a scientific foundation. Studies have not been the sole fare of the student engineers although a major portion of their time has been so occupied. Athletics, fraternities, publications, clubs, and dances have aided in relieving the monotony of classes. The true Techawk has rigorously applied himself to his books and, in his leisure time, has enjoyed and participated in the various extra-curricular activities which capture his interest. The faculty has evinced a keen interest in the students they come in contact with, both inside and outside of classes. They have been only too glad to encourage and aid the students in their different campus activities as well as to advise them in their engineering pursuits.

The intangible something that has nourished Armour Tech along since its conception, with the preaching of a sermon, to a school with definite and forward-looking ideas may well be termed "The Spirit of Armour Institute". We, the staff, in appreciation of that something that has helped make this book possible, dedicate the CYCLE OF 1938

TO THE SPIRIT
OF ARMOUR INSTITUTE
