Chi Epsilon, national honorary civil engineering fraternity, was founded at the University of Illinois in 1922 by outstanding student members of the department of civil engineering. In the following year a petition for a chapter of Chi Epsilon at Armour was presented to the officers of the fraternity. This petition was forwarded to the society by junior and senior members of the civil engineering department of this school. The application was accepted by the fraternity, and a chapter was granted on March 9, 1923, to Armour Institute. This was one of the first chapters to be approved by the organization; today there are fourteen branches of Chi Epsilon in various sections of the country. Since the organization of the fraternity over two thousand students have been initiated into the organization, but the enlargement of the fraternity has not been confined to increasing the membership. Shortly after the fraternity was founded, *The Transit* was issued. This is a bi-annual magazine recognized as the official publication of the organization. It has served to knit the chapters into one complete unit, besides having proved an aid to members and chapters. A member from each chapter serves on the editorial board of the magazine, and it is this procedure that has resulted in such a high spirit of cooperation between the individual chapters of the fraternity for the betterment and advancement of Chi Epsilon itself.
