

# ARMOUR

Unique is the position of the co-operative students at Armour. In school during only one-half of a five year period, they spend the remaining time gaining engineering experience by working in industry. A new and radical departure from standard college training this may seem, yet it is not so much as one might believe: The co-operative system of education was first introduced in 1906 at the University of Cincinnati from whence, by 1930, it had spread to nineteen engineering colleges.

To Armour goes the credit for pioneering this type of education in the middle west. General Thomas S. Hammond, President of the Whiting Corporation and the Illinois Manufacturers' Association inter-
