

THE ARMOUR ENGINEER & ALUMNUS

W. Hendricks

The exceptionally high standard of the publications of Armour Institute of Technology is indicative of the time and attention given to their perfection. The **Armour Engineer and Alumnus**, now thirty years old, is the farthest reaching of these publications, bringing to the students of the Institute, present and past, news of their classmates and news of their alma mater. The **Engineer** is under the general management of Professor Walter Hendricks, Editor-in-Chief. Mr. A. B. Lewis, Assistant to the President, is in charge of business affairs.

Outside of the fact that the **Armour Engineer** is an alumni guide and an indicator of Institute activity, it is also a recognized scientific journal. Foreign libraries, as well as our own national scientific societies, regularly receive the publication. Its four issues annually bring articles of lasting interest on current subjects of a technical nature. The inclusion of a large number of excellent photographs has popularized it so as to appeal to other than engineers. At present it has a circulation of over twenty thousand copies, reaching every alumnus in this country and abroad.

In recent years it has become an increasingly important and influential instrument of Institute publicity. It has attracted the attention of thousands of Armour's friends who follow the life and activity of the college. The **Engineer** has done, and is doing, a creditable service to the Institute, its graduates, and to society as a journal of the progress of engineering education as reflected here at Armour.

A. B. Lewis
