

In 1923 the Armour Chapter of the American Institute of Chemical Engineers was organized with the intention of a closer union among students in the department of chemical engineering and an acquaintanceship of this group with the men practicing the profession. The chapter, the second student branch of the society in existence, has since grown to be a large organization, the present membership consisting of over seventy. The rapid expansion of the organization is due primarily to the efforts of the counsellor, Professor Harry McCormack, whose suggestions and criticisms have formed its foundations.

Row 1: Coyle, Pavel, Dzikowski, Collopy, Keane, Haubert, Peltier, Miller, Wagner.
 Row 2: Bjornstad, Pater, Spencer, Malela, Boertitz, Thomas, May, Kazmierowicz.
 Row 3: Jaffee, Loutzenheiser, Haedike, Bunce, Heenan, Lyckberg, Gryglas, Minard, Kahl.

The past collegiate year found Beta Chapter, the Armour branch, operating under the same successful standards as were adopted a few years previous.

The officers have found that the students have been materially benefited by a program based mainly upon lectures given by the faculty and capable students. The programs have followed this idea all through the year.
