

# THE ARMOUR ENGINEER and ALUMNUS

October, December, March, and May—these are the significant months of the years for the now thirty-one year old Armour Engineer and Alumnus. It is during these months that its twenty-five thousand copies reach out to all corners of the globe and bring to alumni, students, and friends news and comment upon the work at the Institute. To countless others it brings articles of current interest on technical and semi-technical subjects.

The Engineer is received by leading scientific libraries the world over. Our own national scientific societies also include this outstanding publication on their shelves. Its seasonal outdoor scene and dashing band of color across the cover are familiar to all its readers. Its contents are eagerly scanned by the alumni for news of their former fellow students and of the latest progress of the Institute. The features, written in popular tempo, serve to focus interest on engineering accomplishments and, in particular, upon Armour's contribution to industrial and scientific progress.

Serving thus the dual purpose of integrating alumni activity and publicizing the work of the Institute, the Engineer has achieved a definite and necessary position in the program and future of the school.
