The American Society of Civil Engineers is one of the oldest and most active of engineering societies in the country. Its representation on the Armour campus, though comparatively recent, is a most active one. Previous to 1939, the Civil Engineering students carried on their departmental society activities through the Western Society of Engineers. Handicapped by the inappropriateness of this organization for their specific need, they petitioned for membership in the A. S. C. E. and were installed as a regular student chapter in March, 1939.

The establishment of the exclusively civil engineering society brought a renewed interest among the department students to attend meetings and support the society's functions. The past year has seen a program of varied and especially interesting speakers on all phases of civil engineering. A number of programs were illustrated with moving pictures to make the subject a clearer and more interesting one through visualization of the speaker's ideas and explanations. Among the purposes of this society is that of the promotion of both the professional and social interests of its members. At meetings the members are encouraged to closer acquaintance not only with the subject of discussion but with themselves. The society tends to maintain the friendly interests begun at Camp Armour during the summer course where all civils have the advantage of working and living together.
