The aim of Eta Kappa Nu is to "confer honor and bring into closer union, whereby mutual benefit may be derived, those men in the profession of electrical engineering who, by their attainments in college or in practice, have manifested a deep interest and marked ability in their chosen life work". This honorary society of students in electrical engineering and men in the profession came into existence on October 28, 1904, organized by ten students at the University of Illinois.

The requirement for admission into the society is an indication of probable success in the field, for it is based on scholarship and personal qualifications. Several of the men in the electrical department of Armour realized that affiliation with such an organization would be greatly advantageous to the Institute, and so prepared a petition for membership. The Armour charter was granted on May 24, 1909, and thus Delta chapter of Armour Institute became the fourth branch in the fold of the national organization. Twenty-four chapters have since followed suit, until, at the present time, there are twenty-eight in all. Membership is divided into four classes: undergraduate, graduate, associate, and honorary. Undergraduate members are chosen from the junior and senior classes and such members may be elected to graduate membership by their chapters if they have performed meritorious work. Associate members are graduate engineers chosen by an active chapter and approved by the national executive council. Honorary membership is conferred only after receiving the approval of the national executive council and three-fourths of the active chapters. The student chapters are assisted by eleven alumni groups active in the field of electrical engineering.
