

FAST CONSTRUCTION NEED NOT BE COSTLY

Repeated emergency projects — completed ahead of their most hopeful schedules, give evidence that United Engineers & Constructors Inc can rush design and construction without penalizing the owner either in cost or excellence of the finished job.

Over 50 years of experience which stands behind our present staff has proved repeatedly that skilled planning by a competent organization can so closely dovetail the various phases of construction and can so accurately estimate all requirements of materials, time and man power, that speed is obtained without disturbing the Client's operations. Our sixteen largest projects in recent years totaled over eighty million dollars. Yet they averaged in final cost 4% less than their original estimates, even though several of them were completed on high speed schedules. Our experience on both large and small projects is immediately available—as designers, construction managers, actual builders, or in any combination of these functions.
