

At this point, most of the requirements from the client have been obtained (in table below). Based off of this, we have selected the Joomla Client Management System to develop the web-site. The decision was made between Joomla, Mambo, and PHP-Nuke. All three are CMS systems with varying capabilities and weaknesses. The description for each of the CMS systems is provided below. What is left is to continue getting feedback from the client as well as continuing to adapt and modify Joomla as needed to fit our needs.

Description of Mambo System:

Mambo is a full-featured content management system that can be used for everything from simple websites to complex corporate applications. Continue reading for a detailed feature list.

- *A large and healthy user and developer community.
- *Provides a basic level of content approval for registered users.
- *Online help.
- *Page caching mechanism to improve performance on busy sites.
- *Trash manager
- *Advertising management (banners, etc).
- *Media (images, documents) upload and management.
- *Content display scheduling.
- *Content syndication (RSS).
- *Search engine friendly (SEF) URL's.
- *Internationalisation (interface translation).
- *Content macro language (aka mambots).
- *Advanced and separate system administration system.
- *Advanced package/addon/template deployment system.
- *Simple but powerful template system (written mostly in HTML, no complex templating syntax to learn, just a couple of PHP functions to include).
- *Hierarchical user access groups.
- *Basic visitor statistics.
- *Multiple WYSIWYG content editor support

*Simple polls

*Content voting/rating system.null

Many more free addons are available at mamboforge.net.

Some of these addons include:

*LDAP authentication

*Extended user profiles

*Forums

*Media galleries

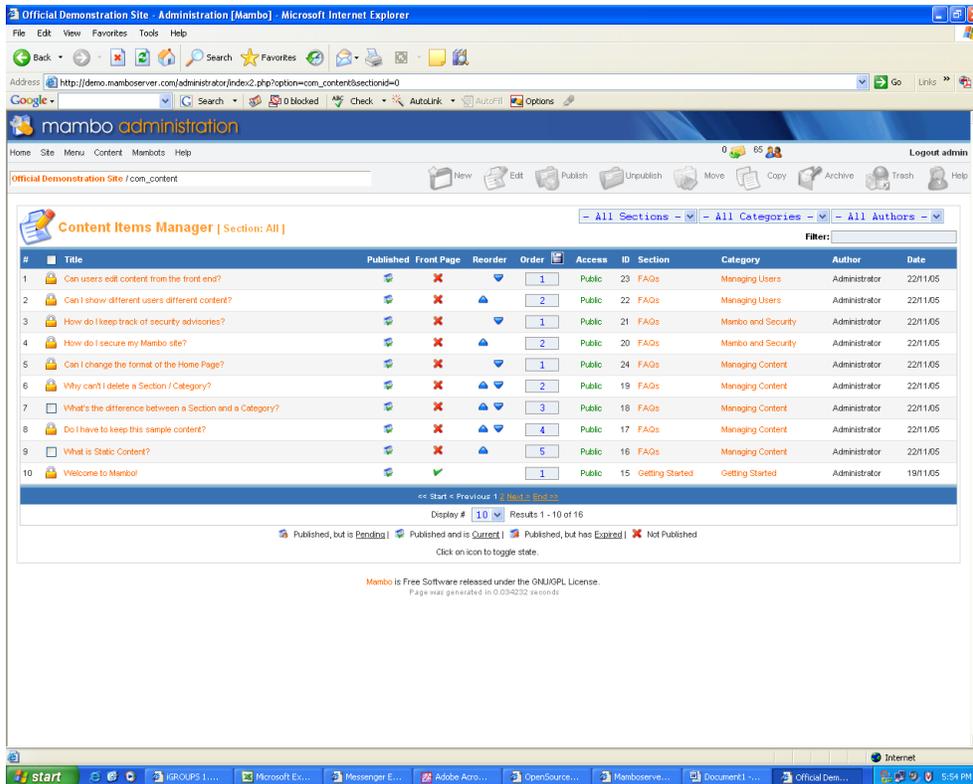

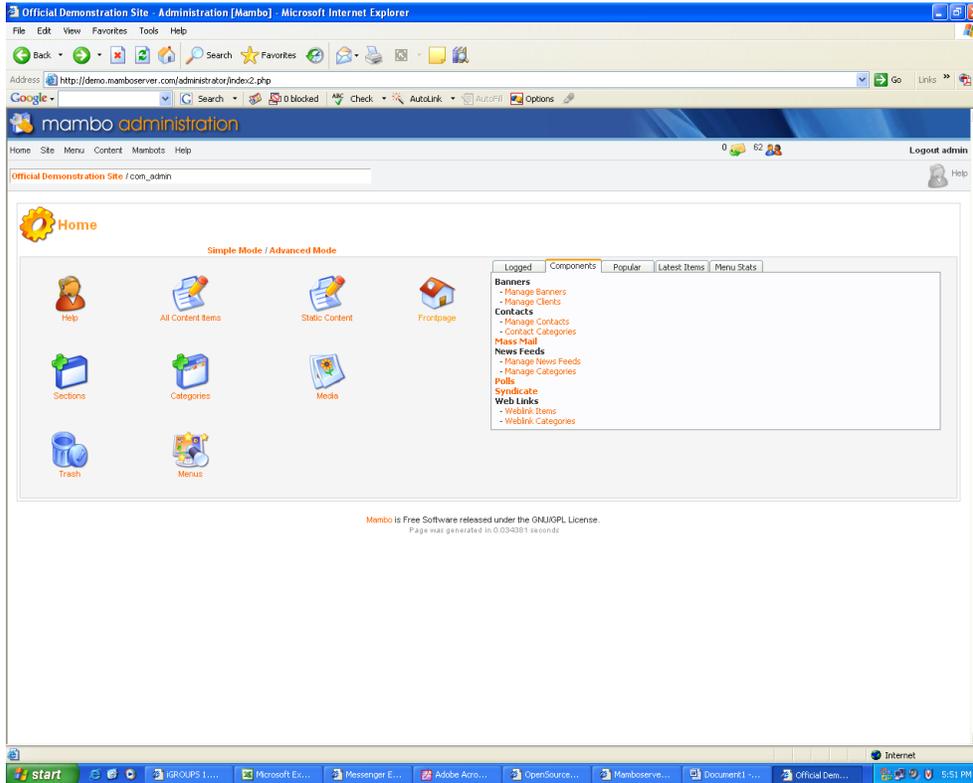

*Document managers

*Templates

*Events calendar

and many, many more...

Benvenuti in Giacco.org

Giacco Web Solutions, Realizzazione di siti web dinamici, dal disegno alla programmazione. Benvenuti nel mio spazio Web. Sono un programmatore di Bengalia, specializzato nella realizzazione di Siti Dinamici, cioè siti che interagiscono con database, dando la possibilità agli utenti di richiedere informazioni in tempo reale. Mi dedico allo sviluppo di siti per qualsiasi esigenza, dall'home page del singolo a portali con numerose funzioni per imprese. Sono inoltre in grado di sviluppare siti che rientrano nei parametri per acquisire il marchio di validazione della W3C (Vedere a tale proposito alcuni dei siti sopra riportati). Nella sezione Contatti troverete tutte le informazioni necessarie per rintracciarmi.

Inserisci il tuo sito nella Directory.

Sito creando un database di siti di Webmaster, Internet Provider, Agenzie di web Services, e tutto ciò che riguarda la programmazione Web. Dalla lista qui sotto potete selezionare una serie di link in base all'argomento, quindi cliccate l'URL da visitare. Potete inoltre inserire il vostro sito, ma solo dopo esservi registrati.

Description of Joomla System

Joomla is an open-source CMS made by the creators of Mambo. It's copyrights are held by Open Source Matters and use of Joomla falls under the GNU/GNL license.

1. Is Joomla! a fork of Mambo?

No, it is a rebranding effort that will continue to run largely on the existing codebase. Work is continuing on the project by the same team that had developed Mambo up to August 2005. Therefore, we see it as continuing development rather than a 'fork'.

2. Why start at Version 1.0?

We decided to reset the version number to 1.0 to reduce the confusion that could be created by having similar version numbers between Joomla! and Mambo. It is not necessarily a reflection on the fact that the project is immature, but rather that it is new and will be different from Mambo. Other projects, such as Firefox, have successfully delivered mature Version 1.0 products.

3. How do the versions compare?

Joomla! version 1.0.0 is derived from Mambo 4.5.2.3 but includes additional bug fixes and patches. Joomla! version 1.1.0 is derived from the original work done by the Joomla! Development Teams towards Mambo 4.5.3.

4. Are patches for Joomla! and Mambo interchangeable?

No. The two projects are maintained independently by different development teams.

5. Will Mambo addons continue to work in Joomla! ?

Addons (templates, components, modules, mambots and language packs) designed for Mambo 4.5.2 will run on Joomla! 1.0. These addons are also likely to run on Joomla! 1.1. However, we cannot guarantee that addons designed specifically for Mambo 4.5.3 will be compatible with Joomla! 1.1 or future versions.

6. Can I just patch my existing Mambo site to make it Joomla! ?

No. The rebranding affects almost all files so it is not possible to patch just a few files.

7. Can I use my Mambo database for Joomla! ?

Yes. Joomla! 1.0 will be able to use a Mambo 4.5.2 database. It's likely that Joomla! 1.1 will be able to use a Mambo 4.5.3 database but at this stage we cannot be certain.

8. What happens in the future when Joomla! and Mambo diverge?

That's a hard question to answer because we don't know.

The screenshot displays a Joomla! website interface. At the top, there is a navigation bar with links for Home, Contact Us, News, and Links, alongside a search bar. Below this is a large banner featuring the Joomla! logo and the tagline "...because open source matters". The main content area is divided into several sections: a "MAIN MENU" sidebar on the left with links like Home, Joomla! License, News, Blog, Links, Contact Us, Search, News Feeds, FAQs, and Wrapper; a central "LATEST NEWS" section with a list of items including "Noticia n.1", "Newsflash 3", "Newsflash 1", "Newsflash 2", and "Example News Item 1"; a "POPULAR" section with items like "Example FAQ Item 2", "Example FAQ Item 1", "Example News Item 4", "Example News Item 1", and "Noticia n.1"; and a "WELCOME TO JOOMLA!" section with a message from the "Web Master" dated Saturday, 12 June 2004. Below the welcome message is a "Sample Image" placeholder and a "Read more..." link. The right sidebar contains a "NEWSFLASH" section with a Joomla! 1.0 announcement, a "Powered by Joomla! version 1.0" logo, a "POLLS" section titled "This Joomla! installation was ..." with five radio button options, and a "WHO'S ONLINE" section showing "We have 4 guests online". At the bottom of the main content area, there are two "Newsflash" items labeled "Newsflash 1" and "Newsflash 2".

Description of PHP-Nuke System

PHP-Nuke 7.9 Final version. This version includes a new variables validation and filtering system more effective and more secure, potential security vulnerabilities generated from the wysiwyg editor has been fixed, BBtoNuke 2.0.17, added banned IP edit function, improved search module internals, quotes and double quotes are now supported on all parts of the system, wysiwyg editor can be totally deactivated from config.php file, users groups fixes to properly load the members modules, several fixes in the advertising system and many more. Additionally PHP-Nuke version 7.8 has been released for free to the public on the downloads section.

Cool Stuff Section

To maximize your site's features comes the new Cool Stuff section with commercial modules and themes like Club Membership Module, Portal-Pro Theme and Photo Gallery Module. These are exclusive modules only available from here. If you're Club member you can find all these modules and themes in there. Enjoy!

What is PHP-Nuke

PHP-Nuke is a news automated system specially designed to be used in Intranets and Internet. The Administrator has total control of his web site, registered users, and he will have in the hand a powerful assembly of tools to maintain an active and 100% interactive web site

using databases.

• **Need I to know HTML to use PHP-Nuke?**

The answer is no. You only need to know the basic functions to change somethings through the system administration included in PHP-Nuke. This system is designed to do all its jobs automated using your preferred web browser. You'll never need to edit files in your server_.

• **What do I need to use PHP-Nuke?**

To be able to use PHP-Nuke you need a computer, an SQL database server (highly tested on MySQL), Apache Web server and PHP version 4.x installed and running. All these programs are available for free in the Internet.

• **What Operating Systems are supported?**

PHP-Nuke runs well on the following Operating Systems:

- Linux
- Any Unix flavor
- OS/2
- Any Windows flavor
- MacOS
- FreeBSD

The system has been high tested on Linux systems, the other operating system has been reported by users that works great. In the future BeOS will be supported, this depends on the MySQL BeOS version to be released soon.

• **Why to use PHP-Nuke?**

There are many similar programs and projects like Slash, PHPweblog, PHPSlash, Thatware, Sips, NewsPro, etc, but PHP-Nuke is designed to be very customizable and flexible, is easy and pleasant to use, thinking about webmasters who pass hours administrating his web site. PHP-Nuke also offers a very high number of features not present on other systems and on each release we'll add much more new and cool features.

• **How many languages support PHP-Nuke?**

PHP-Nuke distribution comes with English language set by default, but you can change it to your own language. There are more than 20 languages supported. Hopefully yours is in the list.

If your language isn't supported you can make the translation. After you translate it you can announce it here on the site. Don't forget to write your credits on the file!

END OF THE SEMESTER FINAL CONTENT MANAGEMENT SYSTEM CREATED

The final content management system for the Play for Peace Organization is created with the Joomla open-source product. Many features are integrated in this system. It will also be moderated by an administrator so that harmful material is not put on the CMS system. Also the users will have the privacy of other not knowing their names but still be able to use the CMS system to its fullest. Here is a list and description of some of the main features of our system:

HOME PAGE – This page is the page that anyone that goes to the site will view. It is a very generic page with information of Play for Peace and what they do. From here users can log-on to the website and use features like blogging, forums, games and the calendar to name a few.

MESSAGING – Users are able to use this feature to contact other people in the Play for Peace Organization in different sites around the world. It serves kind of like an e-mail system however it does not replace it. This messaging system will also allow people using it to send messages anonymously.

CALENDAR – This feature will allow users to schedule events that they plan and will let other users in the same region and other regions to see what is happening. There are many views that users can view the calendar (daily, weekly, monthly, etc.). With this feature the problem of two people booking events at the same time will not occur. Also people from other sites can see when it is best to go to the other sites for a worthy event.

BLOGGING – Many teenagers that will be using this website as a way to discuss many different things that are going in the world and in their lives. The blogging feature will be a very good item for the teenagers to talk about a topic and have others comment on them. The will obviously be moderated by an Administrator so that material that is unacceptable will not be allowed to be posted.

FORMS – This page will allow users to post fill out and submit forms online. With the forms being online it will be very easy for users to spell-check and also for the leaders at each group to catalog these reports. The reports will also be easily accessible to other users to look at and see how the events turned out. This will in turn promote other sites to interact and uses games from other sites.

TUTORIALS – The tutorials that are posted on the CMS will be viewable by all users so that when they first use the site they will know exactly what to do. These tutorials can be edited and can be added by the administrator. The tutorials will help out the people that are in charge at each site to teach the teenagers on how to use the system.

GAMES – This page will be used for users to post and view games. Hopefully next year there will be capabilities for users to upload videos and pictures of the games. This page clearly goes with the views of the organization and will play a big part in the different

countries interacting with each other. The site will literally be a showing how to achieve peace through play. As all of the other pages, this one will be moderated to make sure unnecessary content is not posted.

USER VIEWS: HOMEPAGE –

The screenshot shows the Play4Peace homepage. At the top, there is a navigation menu with links: Home, Contact Us, News, Links, Search, Blogs, Forums, Tutorials, and Games. Below the menu is a large banner with the Play4Peace logo and the text "PLAY for PEACE".

On the left side, there is a "USER LOGIN" section with fields for Username and Password, a "Remember me" checkbox, and a "Login" button. Below this is a "Lost Password?" section with a "Register" link. Further down is an "EVENT CALENDAR" showing a calendar for May 2006.

The main content area features a "Welcome to Play For Peace" message, written by Administrator on Monday, 03 April 2006. It includes a quote: "The world can be a cruel and violent place. In many regions, people are exposed to bigotry, hatred, and warfare." Below this is a paragraph: "At Play for Peace, we teach people to be leaders for peace and how to live and play together in creating more peaceful communities." A photo of two men, one in a white shirt and one in a red robe, is shown with the caption "Letter of Support from the Dalai Lama".

At the bottom of the main content area, there is a paragraph: "PLAY FOR PEACE is a global organization, now in its 10th year, which brings together children, youth and organizations from communities in conflict. As part of our community development initiatives, we use play to promote relationships among people whose communities suffer from a history of cross-cultural tensions. Play is one of the primary ways that human beings learn. Come join us in our effort to create leaders for peace and nonviolent communities." Below this is another paragraph: "Dear Friends of Play for Peace, Last year Play for Peace implemented over 350,000 play days around the world, and this year will be even better. The RUSH fundraising event planned for autumn in Chicago will provide the foundation for organizing and implementing many such events in 2006. Please visit our RUSH web page. Then contact the Play for Peace office at 773-275-0077 to find out about opportunities." At the very bottom, it says: "Over time, these events will provide a large portion of the operating budget for Play for Peace. Also, having a consistent and reliable revenue stream will enable Play for Peace to make even greater progress in its mission to create a more peaceful world, one community at a time. Now more than ever, Play for Peace needs..."

MESSAGING SCREEN –

The screenshot shows the Play4Peace messaging screen. At the top, there is a navigation menu with links: Home, Contact Us, News, Links, Search, Blogs, Forums, Tutorials, and Games. Below the menu is a large banner with the Play4Peace logo and the text "PLAY for PEACE".

On the left side, there is a "USER MENU" section with links: Your Details, Submit News, Submit Web Link, Logout, Write a blog entry, Show your blog, and My Messages. Below this is a "USER LOGIN" section with a profile picture placeholder and the text "Hi, ggaonkar". Below the profile picture is a message: "You have no new private messages" and a "Logout" button.

The main content area features a "Home • My Messages" header. Below this is a navigation bar with links: Inbox, Outbox, Trashcan, Archive, and Compose. Below the navigation bar is a message: "You have no messages in your inbox." Below this is a "Settings" link.

GAMES SCREEN SHOT –

The screenshot shows a Mozilla Firefox browser window displaying the Play4Peace website. The website has a navigation menu with links for Home, Contact Us, News, Links, Search, Blogs, Forums, Tutorials, and Games. The main content area features a large banner with the Play4Peace logo and the text "PLAY for PEACE". Below the banner, there is a "USER MENU" with options like "Your Details", "Submit News", "Submit WebLink", "Logout", "Write a blog entry", "Show your blog", and "My Messages". A "USER LOGIN" section shows the user "Hi, ggaonkar" and a "Logout" button. The main content area is titled "GAMES" and contains a message: "Here you can find games to play with during your meetings. These games are great! Start by clicking on one of the games below." and "If you have a game you would like to add use the 'New' link below. As soon as your submission is approved we will post it on this page." Below this message is a table of games with columns for Date, Item Title, Author, and Hits. The table is sorted by Date descending and displays 30 items per page. The games listed are:

Date	Item Title	Author	Hits
Wednesday, 19 April 2006	Twizzler	Michael Terrien	5
Wednesday, 12 April 2006	Kick the Can	Sabeen Haque	3
Wednesday, 12 April 2006	Freeze Tag	Sabeen Haque	2

Wednesday, 29 March 2006	Introduce yourself	Administrator	59
Wednesday, 29 March 2006	Everyone Grab Your Leg	Administrator	41

At the bottom of the page, there is an "EVENT CALENDAR" section with a "New..." link.

I PRO – 328 NEXT SEMESTER

A lot was accomplished during this semester for this I PRO. This year was all about beta testing this CMS system to see how the organization felt about the site that we had created. There is still a lot more that can be added to this content management system so that it is more user-friendly and has all the small issues resolved. Next year this I PRO will actually start to put up content on there that will be used by the Play for Peace Organization. It will also expand the testing to teenagers and facilitator in the different regions of the world where Play for Peace is located.
