

# **IPRO 345:** iitC.A.R.E.S.

## Introduction

In 2005, diabetes was ranked as the 5th leading cause of death in the world. Diabetes treatment cost was \$185 billion dollars in 2010 in the United States alone. This project is aimed at the use of telemedicine in monitoring and reporting blood glucose levels from home to Sinai hospital for diabetic patients. Our target audience are underrepresented and low-income patients of Mount Sinai Hospital.

**Other features** 

3

Our choice

# Objective

IIT C.A.R.E.S. is collaborating with Mount Sinai hospital to implement practice of telemedicine to:

1. Increase the quality of care for diabetes patients.

2. Decrease the costs.

By providing telemedicine, it allows patients to send daily glucose readings to the hospital via mobile device which can be analyzed by a clinician.

# **Multi-Phase project**

#### **Summer 2011**

-Research available technologies -Obtain the ethics requirement for succeeding semesters

#### Fall 2011 (Planned)

- Se e C
- -Interview Mount Sinai administrators -Perform a trial experiment of chosen device to a group of 25 diabetic patients of Mount Sinai

### Spring 2012 to Summer 2012 (Planned)

-Implement diabetic support center at Mount Sinai

-Administer devices to Mount Sinai diabetic patients

# **Creating Access to Remote Electronic Support**
