## Reproduction and Use

This report was created by the IPRO 301 team along with the Illinois Institute of Technology. These reports are property of the Illinois Institute of Technology, IPRO program. Control over reproduction of the document belongs to the IIT IPRO Program.

No person or organization will be permitted to reproduce this document without permission except for the purpose of use with the IIT IPRO Program, except in the following cases:

...when this document is required for continuation of the project for which it exists (even after the end of the Summer 2009 semester of the project), or

...when reproduced for the purpose of public display to persons not enrolling in IPRO 301 in the future, in which case permission should be obtained from the Summer 2009 members of IPRO 301.

# Abstract

For years, the IPRO Program at IIT has been forced to operate wherever space can be found. Often, facilities are not equipped for the needs of the program. It has become necessary to find a way to give the IPRO Program its own dedicated space.

If we give the program its own space, then what is needed in that space? What needs to be done with it? What types of spaces are necessary? What technologies will be used?

IPRO 301 exists to answer these questions. We will provide ideas to IIT that can solve these problems.

# Chapter 2

## Team Purpose and Objectives

### 2.1 Purpose

The main purpose of IPRO301 is to design and develop a dedicated location for IIT's IPRO Program. For the Summer 2009 semester, the purpose will be to come up with design ideas that can solve the problems.

### 2.2 Objectives

- Determine IPRO's current situation
- Research similar facilities
- Research needs of the program
- Develop designs for potential new IPRO spaces (considering both renovating existing facilities and constructing new facilities)
- Create a proposal, which includes each design

# Chapter 3

## Background

### 3.1 Client

The client for IPRO301 is the Illinois Institute of Technology. Specifically, this project is for the IPRO Program.

### 3.2 Problem Description

At this time, the IPRO Program is distributed across the IIT campus, with no specific location for any of its operations.

The main IPRO offices are in the 3424 Building, along with many of the class meeting locations. This building gives the impression of a cold war relic. It lacks power connections in the rooms, modern technology, printing facilities, tables and chairs, and in some cases, windows. It is also heavily used by a number of programs that are completely unrelated to IPRO.

A number of IPRO classes are in almost random locations all over the IIT campus. Many of these locations do not properly function as meeting/conference rooms, do not have technology desks (projectors, computers, power, internet), and in the case of this IPRO (IPRO301), the room is actively used by random other people during the meeting time.

### 3.3 Potential Solution Technologies

There are two potential options to solve this problem. The first, and more obvious solution, is to build a new facility for the IPRO program. This has the benefit of complete control over everything. The facility can be designed green, modern, secure, aesthetically pleasing, and as useful as it could possibly be. The downside is finding a location. The IIT campus is not large enough to have a number of empty locations available for development.

The second option is to renovate an existing facility. This option has the benefit of not requiring a location. To some extent, it may be possible to save quite a bit on costs by not pouring a foundation, laying basic structural

elements, and other things that can be reclaimed from whatever existing facility.

In either case, the facility in the end will have certain basic requirements. These include technology, including computer labs with internet access and printing facilities, multimedia capabilities, conference centers, and perhaps specialized research laboratories.

### 3.4 History of Previous Attempts

In the past the IPRO program has moved around without ever having a successful dedicated space.

For some time, offices for this program were in E-1 along with a dedicated conference room and team studio workroom.

The HUB was thought to be the ideal building for a collaborative space. After moving classrooms to the Expo area, it became apparent that the HUB would not suffice do to problems with acoustics and time conflicts with other scheduled events.

One architect drafted plans to establish a space within the HUB, but the plans were never documented as they were impractical and difficult to implement.

Currently the IPRO program is housed in 3424 along with the Stuart School of Business. However, there are limited resources and few classrooms and conference rooms.

### 3.5 Ethical Issues

Ethical issues faced by this project include gaining access to similar existing facilities. This requires permission from the organizations behind other facilities.

There may be issues involving potential landmark or historical status for buildings on the IIT campus. Modifying an existing facility might result in these issues getting in the way. As noted in the case of Soldier Field (here in Chicago), which lost its national landmark status after renovation, this issue must be considered.

Also involved in renovating existing facilities is the issue of dangerous materials. Some of the IIT buildings quite literally *are* cold war relics. Two IIT buildings are currently not in use, and have asbestos problems that would have to be addressed.

In the case of a new facility, the impact of the facility must be considered. This includes environmental, social, and architectural concerns.

The final concern is funding. Not only is it important to design the best possible facility, but also to consider both the current economic situation, and IIT's current financial situation. Frivolous spending helps nobody.

### 3.6 Business and Social Costs of the Problem

In addition to the cost of building or renovating, there is also the cost of running the facility that will exist. This is countered by the current cost to the IPRO program, which relies heavily on other program's facilities. Printing, meeting locations, office space, power, communications, and other elements of the IPRO Program's operations have to be covered, whether by the IPRO Program's existing systems, or by outsourcing to other programs or departments.

One of the social costs of the problem is the view and acceptance of the IPRO Program. It is easy to view the program just like its facilities. It is scattered, lacks its own abilities, and does not have an obvious, singular identity at IIT.

### 3.7 Proposed Implementation Outlines

IPRO301 has divided into 3 research teams. We will also divide into 3 production teams. Each team will come up with a solution.

One team will be coming up with a solution that applies to the option of constructing a new facility somewhere on the IIT campus. The other two teams will be looking into renovating existing facilities.

### 3.8 Similar Solutions

There are a number of similar programs and facilities at other universities. Among them are the University of Illinois at Chicago, Purdue University, and Northwestern University.

We will be sending research teams to investigate the facilities at Purdue and Northwestern Universities.

# Chapter 4

## Team Values Statement

### 4.1 Team Value Attributes

#### 4.1.1 Communication

- Email will be checked daily by all members. Responses should be timely.
- Review meeting minutes as needed.
- As much as possible, everybody will keep everybody else “in the loop”.

#### 4.1.2 Integrity

- Each person will be accountable for his/her words and actions.
- Each person will follow through on all promises.

#### 4.1.3 Respect

- Will remain quiet and attentive when someone is speaking.
- Will not speak poorly of other group members in or out of meetings.
- Will keep criticism professional, not personal.

#### 4.1.4 Timeliness

- Arrive on time or early to meetings (both group meetings and meetings with contacts)
- Turn assignments in on time
- Inform the proper people when something will be behind schedule
- Inform the professors, general manager, and respective team leader when meetings will be missed
- We will begin meetings as close to on time as possible, despite attendance issues
- Tasks will be performed in as efficient a manner as possible

### 4.2 Conflict Resolution

In case of conflict, the first step is to meet with the team captain and all involved individuals. This meeting will involve no unnecessary people.

Problems between teams, or involving the team captain, or problems that the team captain can not resolve will be moderated by the general manager.

In the event that the problem can not be resolved by the general manager, then the situation will be handled by the professors. If, for any reason, this does not solve the problem, Tom Jacobius may be contacted.

# Chapter 6

## Expected Results

### 6.1 Research and Testing

The entire first phase of the Summer 2009 semester of IPRO301 is aimed at research. We will be attempting to gather detailed data about the problems that the new facility must solve, the current situation for the IPRO Program, other similar facilities at other universities, and the facilities that exist at IIT that might be used in a renovation.

### 6.2 Products of Research and Testing

The results of our research should be a well enough detailed picture of the situation that we can begin to consider potential solutions.

### 6.3 Potential Task Outputs

Our results will include a fairly decent amount of documentation, as well as the designs for ideas that are produced.

### 6.4 Expected Deliverables

Deliverables will include all documentation generated to describe our research, all documentation of work done, drawings, pictures, renderings, and possibly models.

### 6.5 Assumptions, Challenges, & Risks

In the case where ideas involve potential renovation of existing facilities, the assumption is made that the facilities involved would be available.

Our challenges include the fact that all ideas must come from nothing, since the project is just beginning, and the necessity to design around existing structure in the case where existing facilities might be renovated.

The other main challenge is the fact that this new facility must reflect both IIT and the IPRO Program.

The risks are, mostly, that the ideas created could be rejected. The other main risk is money. Obviously, something like this is an expensive undertaking. One of the challenges of the project is to try to make the new facility a good idea financially. Even so, it is possible that ideas could be rejected based on finances.

### 6.6 Expected Results In the Solution

The main expected result will be 3 booklets, one for each potential solution. These booklets will include programming, floorplans, and other information about the facility.

The other major output will be the collected research about similar facilities. This is where ideas about what should and should not be included in the ideas for solutions at IIT.

## Chapter 7

# Budget

<b>Budget</b>		
<b>Category</b>	<b>Amount</b>	<b>Description</b>
Transportation	\$150.37	Visiting other universities
Models	\$120.00	Models of ideas
Idea Booklets	\$198.00	Final booklets for ideas
Research Printing	\$90.00	Printing of research related items
Final Proposal	\$125.00	Self explanatory
Other Costs	\$66.63	Other costs that may arise
<b>Total</b>	<b>\$750.00</b>

## Task List and Milestones

### 8.1 Project Task Lists

- Research (IIT, Purdue, Northwestern)
- Research Documentation and Analysis
- Creating Solution Ideas
- Documenting Solution Ideas
- Finalizing Solution Ideas
- Creating Solution Documents
- Creating Proposal
- IPRO Day

### 8.2 IPRO Specific Tasks

- Project Plan
- Midterm Presentation
- Final Presentation
- Brochure
- Poster
- Work Product CD

### 8.3 Task Breakdown

See figures on the next two pages.

# Chapter 9

## Individual Member Assignments

### 9.1 Team Organization & Responsibilities

For the Summer 2009 semester, this IPRO has divided into three teams. There are also two phases to the project.

Phase one will be research. This research will have one team per university investigating other university facilities.

Phase two will be development. In this phase, ideas will be created for solutions at IIT. Three ideas will be created, one per team.

### 9.2 Leadership

As there are three teams, there are three team captains. Each is responsible for a team. There is also a general manager, who is responsible for coordinating the three teams.

### 9.3 Individual Member Responsibilities

Team Organization			
Team	IIT Team	Purdue Team	Northwestern Team
Members	Julia Valadez (Team Captain)	Ed Scanlon (Team Captain)	Kevin Krupp (Team Captain)
	Gergana Horozova Nalls	Dennis Radtke	Aaran McEneff
	Faraz Hussain	Alexis Laurence	Kai Hansen
	Joel Cornelius	Mihee Choe	Phillip Brierley
	Vito Natale	Mehrdad Nikamalfard	Kristen Lucchesi
	Jessica Workman	Timothy Phillips	Ruben Robledo

# Chapter 10

## Designation of Roles

### 10.1 Meeting Roles

Roles : Meeting	
Role	Person
Minute Taker	Kevin Krupp
Agenda Maker	Ed Scanlon
Time Keeper	Philip Brierly

### 10.2 Status Roles

Roles : Status	
Role	Person
Timesheet Collector	Julia Valadez
Master Schedule Maker	Kristen Lucchesi
iGroups	Timothy Phillips
