

The project is located in Chicago IL, between Bridgeport and Pilsen neighborhood, on an abandoned industrial site named Bubbly Creek. Discover. Action. Change. summarizes the intervention and the effect of this architectural project. The developed project wants to activate and change this deteriorate site in a place where people can came together and be aware of the new discoveries for green technologies and also can beneficiate of the outdoor space that incorporate lots of activities year-round.

A bike and a pedestrian path are proposed to link two streets from the opposite neighborhoods and also to activate the site. The building, composed of two structures is anchored along the path to reinforce it and also create a reference point to everything ales on the site. The two proposed buildings represent a Research Center for Green Technologies with a training center and an Exhibit / Community space. These two structures are linked together through the RED TWIST element which guides the interested eye from the entrance in the south side all the way to the North side. The twist serves as a floor for the first building and then changes and becomes the roof of the second building.

In the end through all this elements implemented on the site, the project hopes to be o success for bringing people together in a pleasant environment and to an interesting / interactive building that allows visitors to be explored.

# Discover. Action. Change.
