

Goal

To explore all viable options for a secure communal storage facility (Banda) that will benefit all stakeholders in the coffee process and to promote community development without compromising the existing status quo.

Objectives

Develop an effective building design that incorporates important issues revolved around materials, cultural concerns, and stakeholder interests.

Develop understanding of cultural/ethical implications the project poses and propose solutions that are socially responsible.

Accomplishments

Several design schemes and a design concept the next semester can develop and finalize.

Three options for an ethical business plan, a cultural travel guide, and a culturally aware building design.

Future Agenda

Further investigate materiality, construction methodology, labor needs, and a final design concept.

Complete a business plan, consider legal issues and implement knowledge gained from travel.
