Background

The sponsor for this project is Midwest Steel and Services. They operate out of Wheeling, IL and provide specialized steel services and offer a fast turnaround time. A real time information system would provide them with a more efficient means to conduct business, track inventory and process orders. Currently, the company relies on rigorous practices like manually retrieving inventory data from one database and transfer that same data into another

Current Process

The Team

Derrick Davis, Information Technology & Management Cordell Jackson, Engineering Management Pete Mathes, Psychology

Jonathan Roraff, Applied Mathematics Matt Kasa, Electrical Engineer Antinder pal Sohal, Electrical Engineer Jing Kai Tan, Electrical Engineer

Problem

Currently, our sponsor does not have a system allowing for reliable information tracking. The goal of this IPRO is to develop a real time information system for our sponsor, Midwest Steel and Services, so that the issues they currently face will be resolved.

 Implement web application and reports modules

Our team evaluated previous semester's work before deciding to acquire a professional opinion from within the industry. The decision was made after realizing that there was very little in terms of a framework to continue from. After consulting with a fellow IIT professor and grad student, our team adjusted its programming efforts towards what we determined to be a more efficient system. We were able to design a functional web application allowing access to three separate pages: Inventory, Reports, and Home, After demonstrating this new system to the employer, the workers gave us a new direction to go in. We were able to draw from their day to-day experiences in attempt to improve their current methods and system.

a metal service and processing center serving the plastic injection g industries. We specifically serve mold builders, mold base cers. "Turning Steel into Enhanced Productivity" is more than our siness. With our convenient in-house processing, we provide quick rs time and money while helping them focus on their core
