

## PROJECT PLAN FOR IPRO 344 – ADVNCING COMMUNITY GARDENING

- All team members work at the site to clear the trenches of rubble and debris.
- Trenches to be filled to midpoint from one end with original soil from the site and from the other end with organic soil brought in to the site.
- Seeds planted in each side of all five trenches.
- Group divides into different sub teams to complete research, water and maintain the trenches, maintain the site and perimeter, and to do the testing of soil and plant material from each trench for lead and other heavy metal content.
- Summarize results
