

Worksheet for Pressures, Risks, and Principles

Overarching Team Principle:

TO EDUCATE SOCIETY OF THE IMPORTANCE TO RECONNECT AND IMPLEMENT NATURE'S CONTINUOUS REUSABLE RESOURCE LIFE CYCLE INTO THEIR DAILY LIVES AND THEIR WASTE PRODUCTION

Law and Regulation

Pressure: We want to include surrounding schools, businesses and neighborhood organic waste for the production of compost.

Risk: We lie and say there is no possibility of compost producing odor to make it more attractive for the society.

Pressure: Our deadline to submit a budget plan is too short for accurate numbers.

Risk: We assume and present low cost analysis to make composting more attractive.

Canon: We will uphold the utmost truth and facts for correct and thorough education of society.

Community (IIT Community)

Pressure: We want the students, faculty and visitors of IIT to comply with the sorting of their waste in the appropriate receptacles in the cafeteria and around campus for easier composting procedures.

Risk: We don't provide enough receptacles or proper explanation into the sorting of waste.

Pressure: We want IIT campus to learn and understand the importance and benefits with composting.

Risk: We don't educate thorough enough which has the campus questioning the importance and benefits.

Canon: We will put all efforts into thorough education and awareness for composting and its benefits for society and the world.

Personal Relations

Pressure: We want all outside communities to comply and contribute with eliminating needless landfill waste.

Risk: We overwhelm the community with how awful landfill waste is and tell how much more beneficial composting is and will be.

Pressure: We want the communities to comply with little hesitation and as quickly as possible.

Risk: We tell them that there will be no obstacles to overcome, when in reality composting is a lifestyle change.

Canon: We will put all efforts into helping make the communities' lifestyle changes as easy and efficient as possible.
