I PRO 303 *It takes a team!*
INTERPROFESSIONAL PROJECTS PROGRAM

Ipro 303 Advisor

James Burstein

Project Statement:

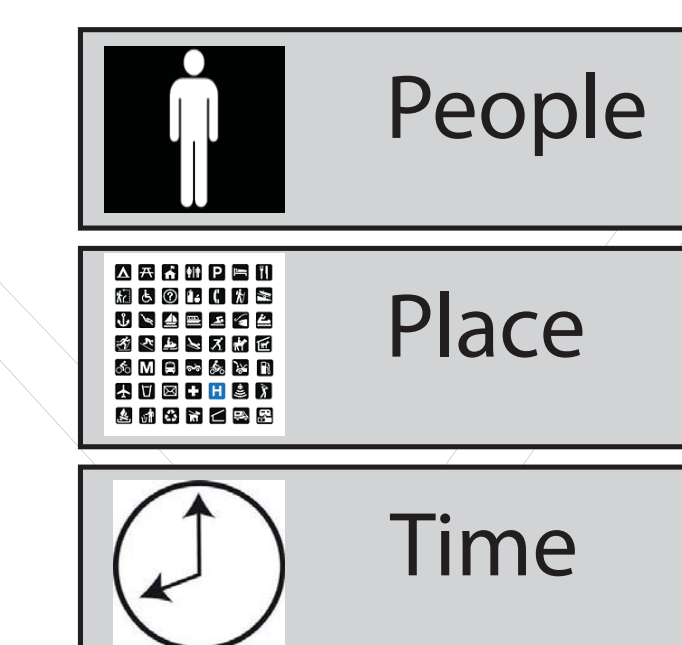

- NAVTEQ has presented us with the challenge of finding a user-friendly way for pedestrians to socially interact with NAVTEQ's map data.

IPRO 303 Past Accomplishments

- Created a definition of a Micro-landmark
- Determined who will be the data providers of Micro-landmark information
- Established a reporting process for the data providers to NAVTEQ

Goals:

- Identify new points of interest from real time streaming content providers
- Gather new and updated attribution regarding those places
- Generate a time/space "mood-graph" describing each of these places in a relevant and contextual way

A mood graph is an attempt to show the connection between people, place and time into a understandable graphic representation
