

# IPRO 344

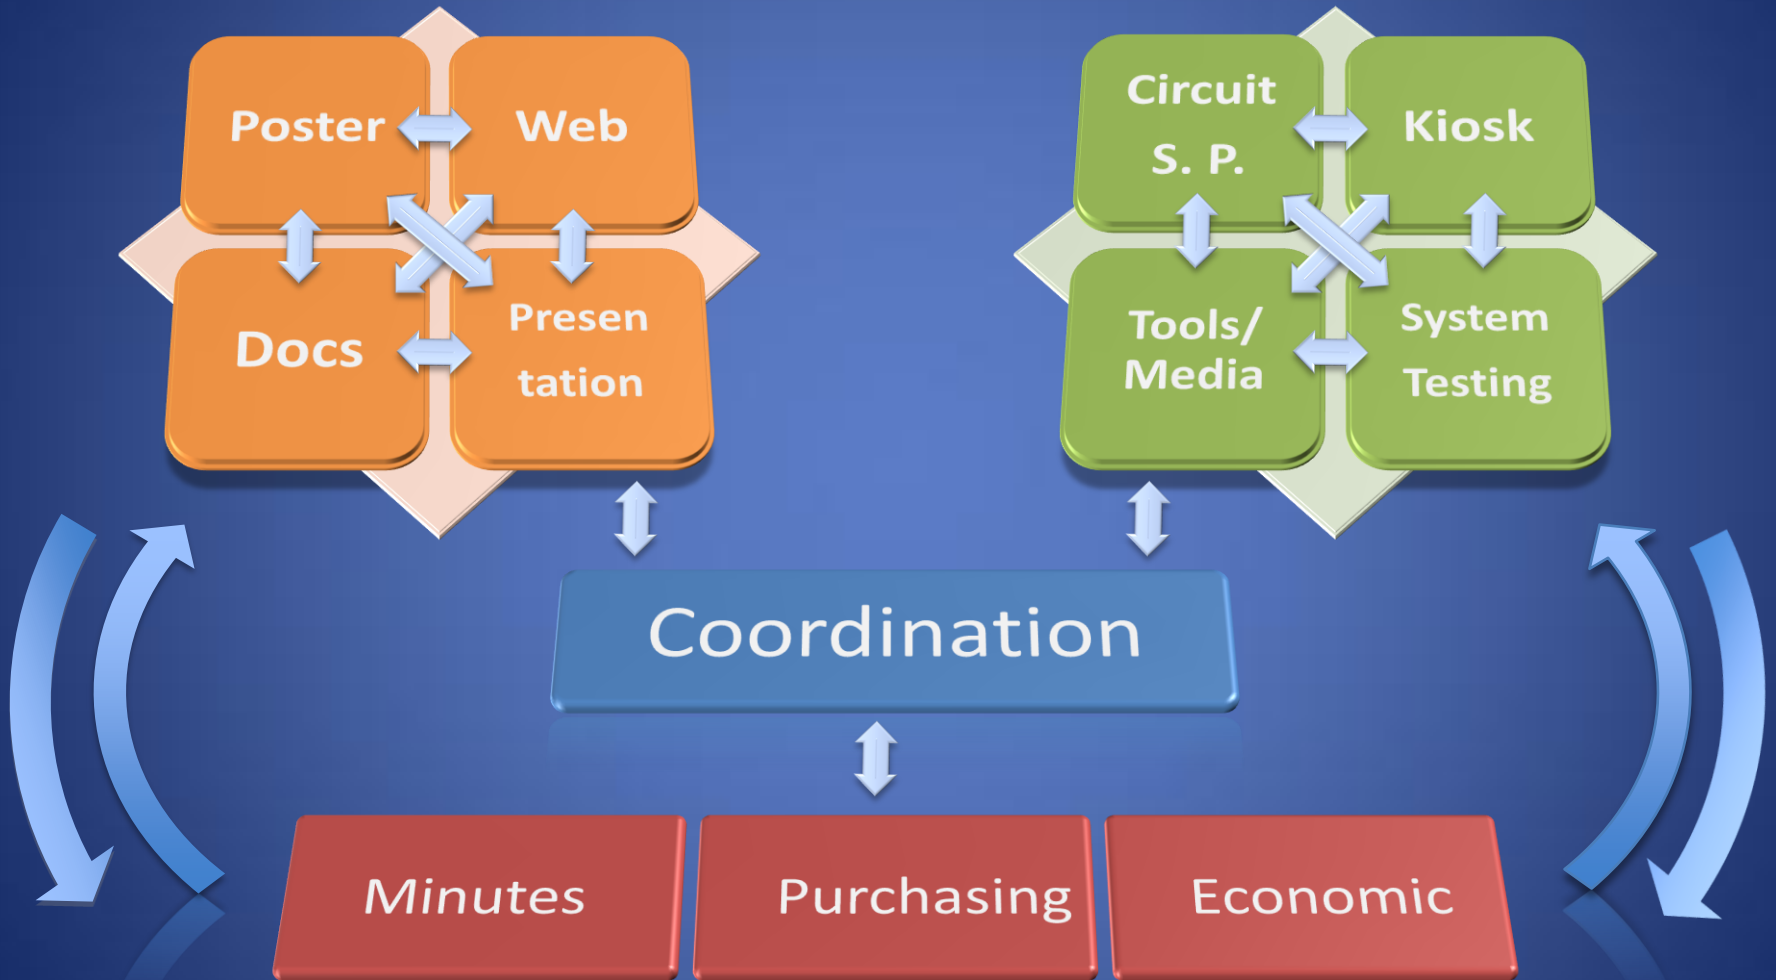

*Improving Energy Efficiency and  
Offering Quality Audio in Mobile  
Devices and Intercom Systems*

# Statement of Problem

In the fast food industry there is no current standard for Drive-Thru systems. Low quality systems can result in order capture error.

# Organization of Team

# Goals of Project

- **Overall Goals**

- Create an industry standard for testing and implementing drive thru systems

- **Immediate Goals**

- Obtain quantitative data on the quality of sound capture for two-way communication systems
- Create a refined prototype Drive-Thru kiosk
- Analyze common sources of noise in the Drive-Thru environment

# Progress Toward Goals

- New kiosk enclosure designed and constructed
- Designed new circuit additions
  - Equalizer
  - Client priority gate
  - Mixer circuit

# Progress Toward Goals (continued...)

- Researched audio quality measurements
  - SII (Speech Intelligibility Index)
  - STI (Speech Transmission Index)
- Software Tools
  - Created software tools to analyze common sources of noise in the Drive-Thru environment
  - Researched software tools to measure SII and STI

# Obstacles

- IPRO 343 has changed their focus
  - Solution: Investigated intelligibility standards
- Poor accessibility and adaptability of existing kiosk
  - Solution: Constructed a refined kiosk
- Anticipated Uncertainty
  - No reference for performance of existing systems

Q & A
