

Process Flow

Tasks

Research contemporary systems

Find other companies offering similar systems and look at their goals and technology they used.

Prioritize features for consumers and proprietors

The features focused on for the semester were high priority for both stakeholders.

System schematic

Create a schematic that outlines the features of the system.

Determine feasibility of features through various technologies

Look at technologies available and see what features can be produced using that technology.

Consult vendors and garage proprietors

Contact vendors for cost estimates and expert opinion. Meet with proprietors about potential sponsorship and gain feedback about the system.

Survey consumers

Distribute survey to evaluate the severity of different problems drivers face when parking as well as to receive feedback on our system.
