

Legal Aspects Website

IPRO

Administration

- Legal content will expand and grow.
- Content will need updating

Traditional Website

- Requires a developer
- Each new content requires a new page and new links

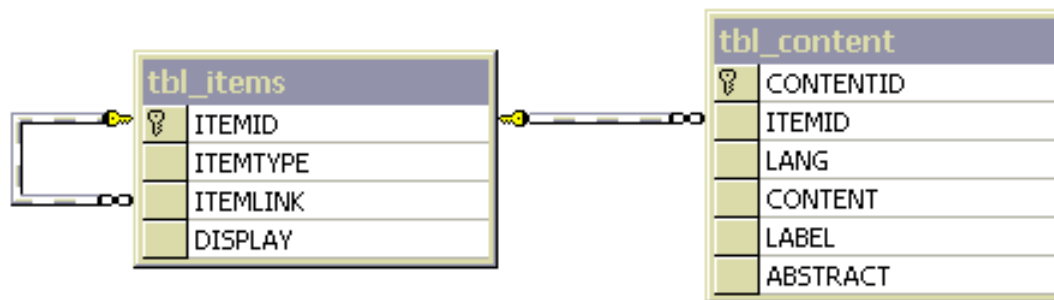

Dynamic Administration

- Non-technical authors can create and edit new hierarchies
 - Content can be created as text or HTML using already familiar tools such as notepad or Microsoft Word
 - Updates and additions are performed via admin webpages and stored in a database
- 

Database Design

- To accommodate dynamic hierarchies and content, the database was organized in this manner

Database Design

- Items represent hierarchy, and therefore can link to other items, representing a folder tree structure similar to windows.
 - Content is linked to items, and are analogous to files in a folder.
-
