Ethics statement: Industry Standards

Challenge: Meeting educational standards in project design

Risk: Not having the interest of schools or educational groups, not being identified as an educational institution

Response: Researching NSF standards for science and technology education, finding CPS curriculum charts, meeting with CPS and NSF representatives and gaining their insight, applying all of this to each project

Challenge: Creating an equally supported association between the Lab and IIT

Risk: Not meeting the standards set by the IPRO program or the expectations of the MSI Staff and liaisons, therefore not forming a good business relationship to assist in the furthering and continuation of the IPRO

Response: Creating good channels of communication with the lab directors as well as with other staff at MSI, gaining knowledge of what is expected from our group, and working continuously to achieve all goals and meet all expectations.
